8. Appendices

Business Concept

Core idea

GOM VỊ is an **e-commerce** business that uses a digital platform to bring **traditional Vietnamese snacks and sweets from different regions** into one modern discovery experience.

What do we sell?

The business organized into a clear **three-tier structure**:

REGIONAL SNACKS — **DISCOVER, REGION BY REGION**

- Gom Bắc (North) : ô mai, bánh đậu xanh, kẹo lạc
- Gom Trung (Central) : mứt Huế, mè xửng Huế, bánh khô mè
- Gom Nam (South) : bánh pía, kẹo dừa, bánh in

CURATED & GIFT BOXES — **READY-MADE CONVENIENCE**

- Gom Bắc Box, Gom Trung Box, Gom Nam Box : single-region gift sets
- Gom Việt Box : a mix of all three regions in one box
- Gom Trăng : a seasonal Mid-Autumn Festival box
- Gom Tết : a seasonal Lunar New Year box

BUILD YOUR OWN BOX "GOM THEO Ý" — **PERSONALIZED BOX**

- Customers mix snacks freely from all three regions: a standout interactive feature, highlighted as its own page.

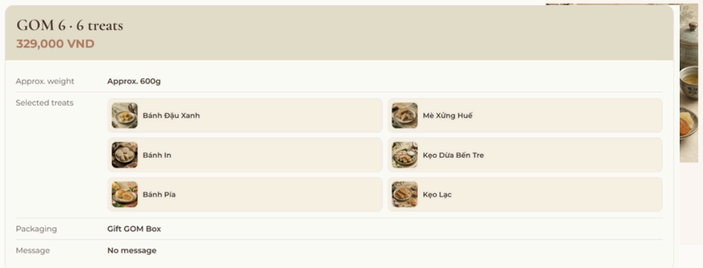
-Choose your box->Choose your preferred treats-> Choose the packaging/message

Our Niche

Region-based Vietnamese traditional snacks

"GOM VỊ" business model

- **Curated B2C retailer:** GOM VỊ sources finished products and specially packed portions from regional producers, retaining producer identification while using a consistent GOM VỊ presentation for curated/custom boxes.
- **Core & seasonal offering:** Individual regional treats and pre-curated gift boxes form the core portfolio, while Mid-Autumn and Tet seasonal boxes, including annual/pre-booked cakes and serve as extensions.



Business Concept

Concept Relevance

Regional snacks are **fragmented** across local markets and small producers, making **multi-region** access difficult. We bridge this gap by serving three distinct customer needs **in one place.**

This business solves that gap with a structure that serves **three distinct customer needs** at once:

1. Customers who want to **discover and try individual snacks** from a specific region (Regional Snacks)
2. Customers who want a **convenient, ready-made gift** without deciding item by item (Curated & Gift Boxes)
3. Customers who want **full control and personalization** over what goes into their box (Build Your Own Box)

Website Contribution

- Discovery → Search/filter by region and product
- Understanding → Origin + cultural storytelling
- Selection → Curated collections + Build Your Own Box
- Purchase → Easy checkout + reordering
- Seasonality → Tết/Trung Thu collections and campaigns

Business Objective

- **Consolidate access:** bring authentic regional snacks from small, scattered producers into a single, easy-to-browse online destination.
- **Strengthen authenticity and informed choice:** Product origins, cultural stories and curated collections help customers understand products and choose with confidence.
- **Drive both everyday and seasonal sales:** build a customer base that buys regularly (Regional Snacks) while capturing high-value seasonal demand (Tết, Mid-Autumn gifting).

E - Business Framework — Harvard Framework

Source: (Harvard Business Review 2021)

By bringing snacks from different regions into one searchable platform, the website **makes discovery and purchase easier,** directly **leveraging product availability and ease-of-use** factors proven to **drive online impulse buying** (Liu and Li and Hu 2013).

Easy reordering, curated gift collections, and seasonal campaigns leverage **repeat purchases** while capturing festival/Tết and Mid-Autumn demand.

Market Gap

Vietnam's overall snack market has **nearly tripled** since 2012 and **continues to grow steadily**, reaching VND 65,569 billion in 2026 (Euromonitor 2026)(Appendix A).

However, as shown in earlier industry research, this growth is **largely driven by modern and imported snack categories** (chips, imported confectionery, dairy-based snacks), while **traditional treats maintaining appeal mainly to older consumers and tourists.**

A key consumer segment strongly **seeks new experiences** (Euromonitor 2026, Appendix B), suggesting traditional snacks **may no longer feel exciting enough,** pushing them toward **modern/imported alternatives**. The gap isn't just access; what's missing is a platform that makes traditional/regional options equally accessible.

This creates **a Gap:**

Total snack demand is rising > ***But*** < **Authentic traditional products are not capturing a proportional share of that growth**

Untapped opportunity: consolidate access to traditional regional snacks online; digital distribution hasn't caught up with demand.

Customer Pain Point

Specific customer problem

Vietnamese consumers **don't have a platform where they can customize the regional snacks they want;** 86% seek curated experiences tailored to their taste (Euromonitor 2024, Appendix C).

⟶ Consumers are limited to fixed products or generic gift sets, with **no platform letting them build a personalized selection across regions.**

Existing unmet need / gap

Food safety and quality standards are a **top barrier** to CPG adoption among Vietnamese consumers (Chan 2024).

This creates a clear **positioning opportunity of Gom Vi**: by sourcing from small, traditional producers with **transparent, traceable origins**

→ **Gom Vi** can directly address this trust gap, **offering authenticity and quality assurance** that mass-produced alternatives often struggle to communicate.

How GOM VI website closes this gap:

- Consolidates scattered producers into one platform
- Full personalization via "Gom Theo Ý"
- Builds trust through transparent sourcing

→ Turns latent demand into everyday + seasonal revenue

Product/Services

Main product categories

Gom Vi product categories display **9 individual regional treats** across **3 regions** (Gom Bắc, Gom Trung, Gom Nam), alongside **3 curated multi-region collections** (Gom Việt, Gom Trăng, Gom Tết) and the **Gom Theo Ý build-your-own feature**.

Our website is all designed around **GOM VỊ's core convenience:** letting one customer, in one order, taste the full range of Vietnam's regional snacks instead of having to choose just one region or hunt across multiple sellers.

Unique features or benefits

Feature	Benefit to customer
Snacks sold individually, not only in bundles	Lets customers buy exactly what they want: a single favourite item, a small trial purchase, or a full personal restock, without being forced into a set package.
Clear flavour/texture tags on every product (e.g., "Tangy • Sweet-salty • Chewy")	Helps customers choose products that match their taste preferences before buying.
Transparent pricing per item (49,000–79,000 VND)	Builds trust and allows easy comparison across individual products
Pre-curated gift collections (Gom Việt, Gom Trăng, Gom Tết)	Removes decision fatigue for gift-buyers who want a ready-made, presentable option
Gom Theo Ý customization	Gives customers full control to combine individual treats into a personalized box->personalization

Target Market

Primary target segment (Appendix D)

- Young Vietnamese adults (25s–40s)
- Living away from their hometown, buying for themselves or as gifts.
- Actively purchasing online with personalized preferences.

Needs

- Value convenient, all-in-one access over having to search multiple sellers (Euromonitor 2024)
- Emotional connection to hometown flavours and memories
- Convenient access to traditional snacks

Preferences

- Modern, attractive, and well-packaged
- Cultural heritage strongly shapes consumers' culinary preferences, drawing them toward authentic, regional Vietnamese flavours that reflect a region's distinct identity and cultural significance (Luong & Nguyen 2025).

Behaviors

- Want product information, comparisons, and reviews at their fingertips before buying (Euromonitor 2024)
- Value transparent delivery timelines and reliable return policies when shopping online, especially for food products bought as gifts (Euromonitor 2024).

Relevant online behavior

- Consumers **actively search online** for authentic Vietnamese snacks (Appendix E)
- **Prioritize experience over transactional purchases** → an engaging website interaction increases dwell time and interest (Euromonitor Voice of the Consumer 2024)-> this is what GOM VI website covered.

Value Proposition

Gom Vị makes traditional Vietnamese regional flavours **easier, more engaging and more meaningful** to discover through authentic products, curated regional collections, cultural storytelling and flexible box selection.

Authenticity

Clear origin, regional identity and cultural context.

Builds trust and helps users understand what they are buying.

Regional Discovery

Explore flavours through Gom Bắc, Gom Trung and Gom Nam.

Guides users who may not already know which product to search for.

Story-led Experience

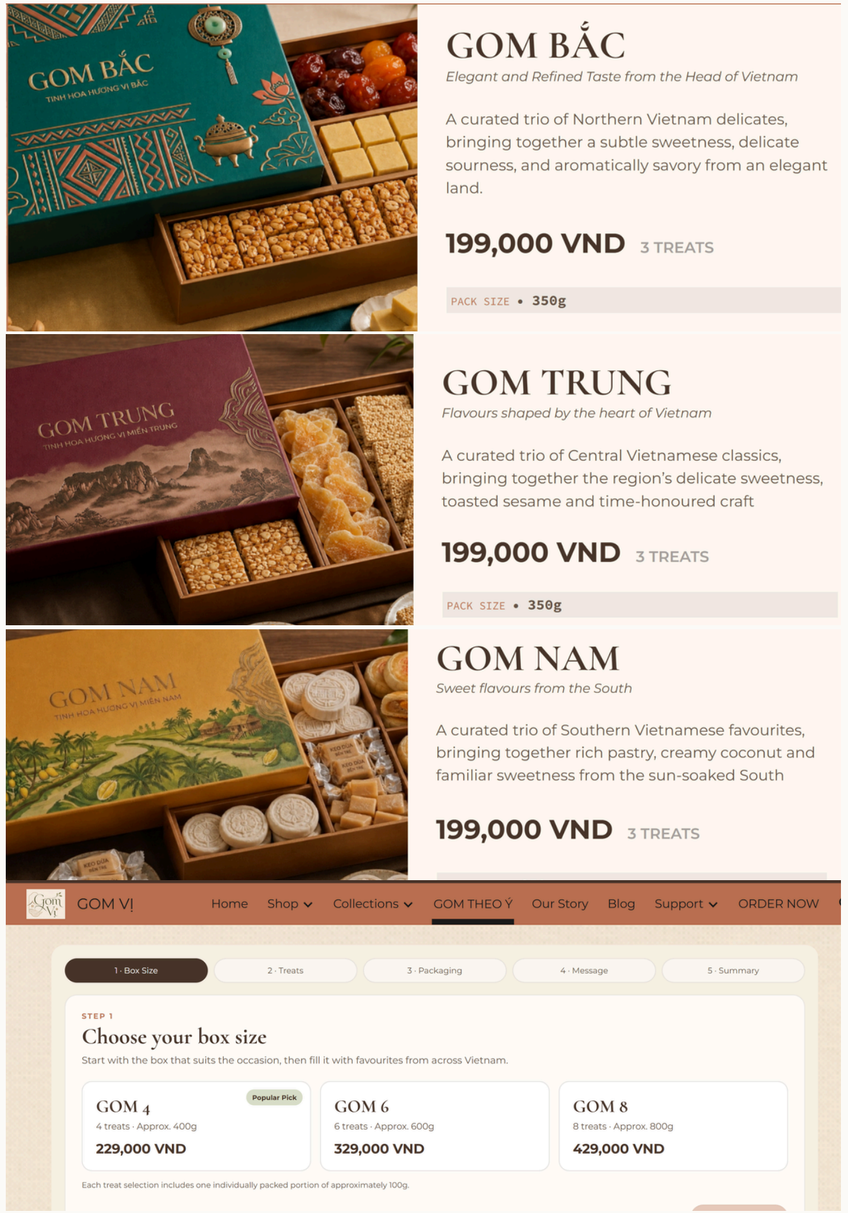
Products are connected with places, traditions and cultural stories.

Turns browsing into a more meaningful discovery experience.

Flexible Curation

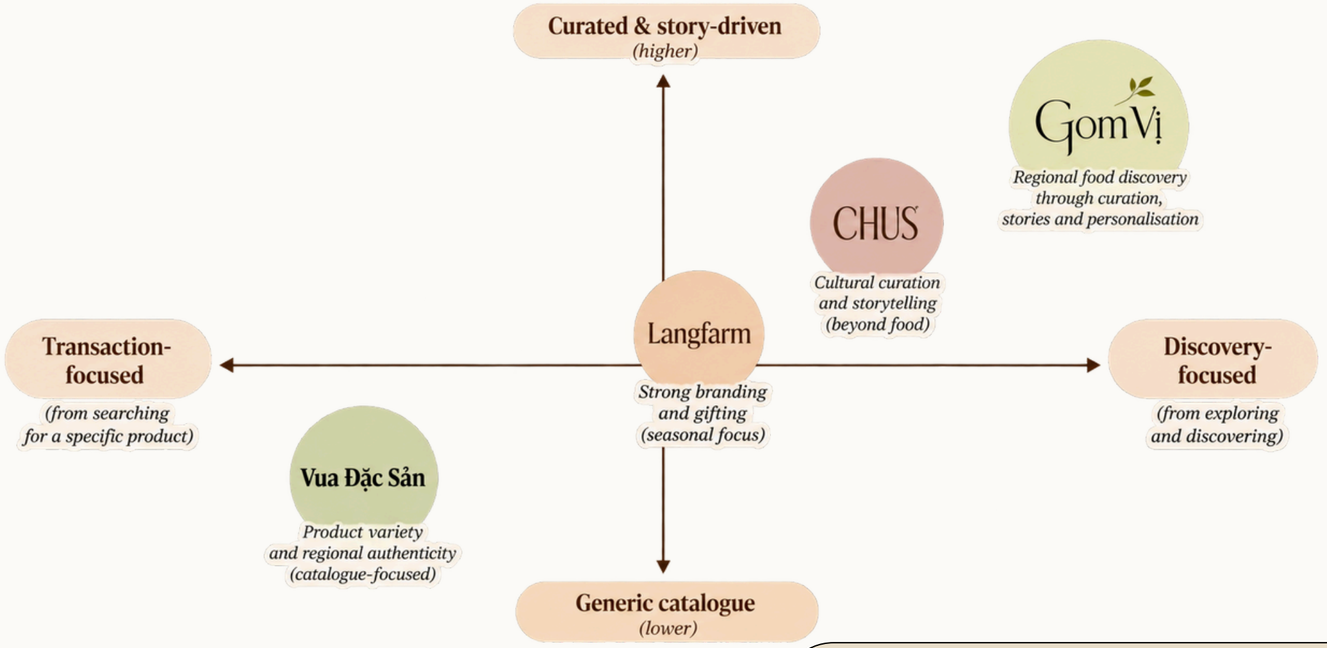
Choose ready-made collections or personalise through Gom Theo Ý.

Reduces choice overload while preserving individual preference.



Competitive Landscape & Digital Positioning

Brand	Vua Đặc Sản	Langfarm	CHUS	GOM VỊ
Core Offering	Broad range of Vietnamese regional specialties	Traditional food, modern branding and curated gift sets	Curated Vietnamese cultural products and gifts	Regional snacks, curated collections and custom boxes
Digital Strength	Strong product variety and regional authenticity	Strong branding, gifting and seasonal presentation	Strong storytelling, craftsmanship and curation	Discovery, storytelling and personalisation
Limitation / Opportunity for Gom Vị	More catalogue- and transaction-focused, with limited guided discovery	More product- and gifting-oriented than year-round regional exploration	Broader than food, not specifically focused on regional food discovery	New brand with lower awareness but clearer regional food-discovery focus



Why Gom Vị?

Gom Vị is positioned around discovering Vietnamese regional food, rather than simply purchasing individual traditional products

Competitive Opportunity Existing competitors are strong in product breadth, gifting or broader cultural curation. Gom Vị brings these elements together around one specific experience: discovering Vietnamese regional food.

Conceptual Positioning

- **Vua Đặc Sản:** *more transaction-focused and catalogue-oriented*
- **Langfarm:** *mid-position, stronger branding and gifting*
- **CHUS:** *curated and story-driven*

⇒ **Gom Vị:** *discovery-focused and curated/story-driven*

Initial Marketing Strategy

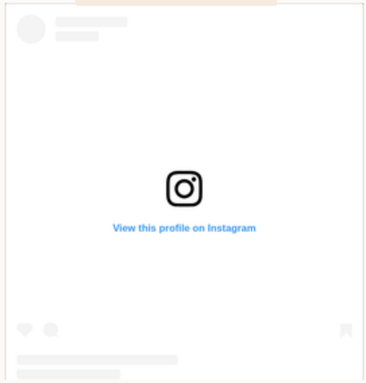
Implemented Channel

WOM / eWOM: encouraging shares, tagging and organic conversation

Promotional campaigns: discount / giveaway and Mid-Autumn campaign

SEO: improving discoverability through search over time

INSTAGRAM FOR PROMOTION



Implemented Channel

- **Instagram:** brand awareness, product discovery, website CTA
- **Direct sharing:** sharing the website and collection links through personal networks
- **Email outreach:** inviting users to visit Website V2, test the journey and provide feedback

The initial strategy does not rely on one channel only. Instead, it creates multiple entry paths into the Gom Vị website, turning awareness into measurable website exploration.

Build initial awareness for Gom Vị and drive real, trackable traffic to the website through social media, direct sharing and email, while supporting future growth through planned promotional and SEO activities

Marketing Activity	Audience	Traffic Source	Website Entry	Intended Action
Instagram posts / reels	Young Vietnamese adults	Social traffic	Homepage / collection pages	Explore products and collections
Direct sharing (EWOM)	Friends, classmates, personal networks	Direct / shared link traffic	Homepage / selected product page	Quick website visit and browsing
Email outreach	Early testers / invited users	Email traffic	Homepage / feedback journey	Test website and submit feedback
Planned Mid-Autumn campaign	Seasonal gift seekers	Social / campaign traffic	Gom Trăng page	Discover seasonal products
Planned SEO	Search user	Organic traffic	Homepage / regional pages	Discover Gom Vị through search

Landing-Page Strategy & Implementation Plan

Primary Landing Page: Homepage

The Gom Vị homepage acts as the main entry point for most initial marketing traffic, providing a broad introduction to the brand and clear pathways to regional collections, curated boxes and personalised options

Why Homepage?

Broad Brand Introduction

Introduces Gom Vị's concept, value proposition and overall product structure before users choose a specific product.

Central Navigation Hub

From the homepage, users can continue to: Gom Bắc · Gom Trung · Gom Nam, Gom Việt · Gom Trăng · Gom Tết, Gom Theo Ý, Product pages, etc.

Suitable for Mixed Traffic

Instagram, email and direct sharing reach users with different levels of awareness, so the homepage provides useful context before deeper exploration.

Supports Discovery-led Positioning

Rather than sending unfamiliar users directly to one product, the homepage encourages exploration across Gom Vị's wider offering.

Traffic Source	Entry Page	Rationale	Intended Action
Instagram Bio / General Social	Homepage	Provides broad brand context and supports exploration	Discover Gom Vị → explore collections
Email Website V2	Homepage	Supports testing of the overall website journey	Explore site → submit feedback
Direct Sharing	Homepage	Suitable for users with mixed awareness levels	Browse brand and collections
Mid-Autumn Campaign	Gom Trăng page (optional deep link)	Promotion is already collection-specific	Explore Gom Trăng
Future SEO	Homepage / relevant regional page	Entry depends on search intent	Discover relevant content

Implementation Plan

- Use the Homepage as the default landing page for broad awareness traffic.
- Make homepage sections clearly communicate the brand and major product pathways.
- Use strong internal CTAs to guide users from homepage → collections → product pages.
- Use campaign-specific deep links only when traffic intent is already specific.
- Track entry and navigation behaviour later through GA4 to understand how users move from the homepage into deeper pages.

Key Insight Homepage-first navigation supports Gom Vị's discovery-led customer journey by allowing users to understand the brand before choosing where to explore next

V1 - Website Overview & Structure

Website Purpose

Provide an e-commerce platform for discovering, personalising and ordering Vietnamese regional treats and gift boxes.

Website Overview

- 17 webpages
- Google Sites prototype
- Vietnamese regional treats & gifting
- Website: https://sites.google.com/view/gom-vi/

Figure 1: Homepage

Website Structure

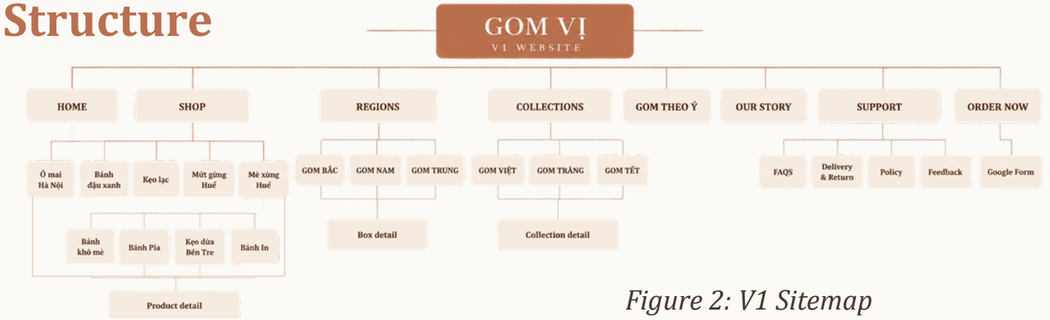


Figure 2: V1 Sitemap

Page purposes

REGIONAL PAGES

- Regions - Support regional product discovery
- GOM Bắc - Present Northern box, contents & price
- GOM Trung - Present Central box, contents & price
- GOM Nam - Present Southern box, contents & price

CORE PAGES

- Home - Introduce brand concept & offerings
- Shop - Browse & evaluate individual treats
- Our Story - Communicate brand story, values & mission

CUSTOMISATION & ORDER

- GOM Theo Ý - Enable personalised box creation
- Our Story - Communicate brand story, values & mission

COLLECTION PAGES

- Collections - Introduce curated & seasonal collections
- GOM Việt - Present three-region curated box
- GOM Trăng - Present Mid-Autumn collection
- GOM Tết - Present Tet collection

SUPPORT PAGES

- FAQs - Address common customer questions
- Delivery & Return - Explain delivery & return processes
- Policy - Explain privacy & cookie practices
- Feedback - Collect feedback on user experience

V1 - Customer Journey & Phygital Experience

Customer Journey Mapping

1 AWARENESS — *Discover the brand*

Relevant webpages
- Home
- Our Story

2 CONSIDERATION — *Explore and evaluate*

Relevant webpages
- Shop
- Regions
- Collections
- Regional Box Pages
- Collection Box Pages
- GOM Theo Ý
- FAQs
- Policy

3 ACTION / PURCHASE — *Select and order*

Relevant webpages
- Regional Box Pages
- Collection Box Pages
- GOM Theo Ý
- Order Now

4 POST-PURCHASE / RETENTION — *Receive and stay connected*

Relevant webpages
- Delivery & Return
- FAQs
- Feedback

Phygital Experience

Phygital customer experience integrates digital and physical touchpoints to create a continuous customer journey across online and offline settings (Batat 2022)

INITIAL MARKETING

Instagram Content & Product Promotion

Build awareness and direct users to the GOM VỊ website

DIGITAL EXPERIENCE

Find Your Flavour
Complete a quiz to receive product recommendations

GOM Theo Ý
Select treats and personalise a box online

Order Now
Submit the selected order online

PHYSICAL EXPERIENCE

Receive & Experience

Receive the GOM VỊ box for gifting or consumption

DIGITAL RE-ENGAGEMENT

Feedback

Return to the website to share feedback after experiencing the product

Digital interactions shape the physical GOM VỊ experience, while feedback reconnects customers with the digital platform

V1 - Design Principles

Eye Tracking Pattern - E Pattern

Eye-tracking research shows that website design influences how users allocate visual attention across different elements of a retail homepage (Boardman et al. 2023)

Figure 2, 3, 4, 5: E-pattern scanning applied to the landing page

Pattern Identified: The GOM VỊ homepage generally follows an **E-pattern**, with repeated horizontal content sections supporting left-to-right scanning as users progress vertically down the page.

Design Implication: The E-pattern supports rapid scanning and progressive discovery of key offerings across the long-form homepage.

Ethical Design

Ethical e-commerce UX/UI emphasises principles such as transparency, privacy, accessibility and security to minimise potential harm to users (Caldas-Arquero et al. 2026)

Pricing & Information Transparency

PARTIALLY MET

Prices and product information are visible, but some inconsistencies may reduce transparency

Accessible & Fair Policies

MET

Delivery, return and privacy information is provided through dedicated support pages with clear conditions and timelines

Data Privacy & Consent

PARTIALLY MET

Data handling is explained, but clearer information is needed when personal data is collected through forms.

Ethical Checkout & Payment

LIMITED APPLICABILITY

No real payments are processed, and the academic prototype status is clearly disclosed.

V1 - UI Evaluation

WEBSITE EVIDENCE	V1 UI FINDING	EVALUATION	POTENTIAL CONVERSION IMPACT
	Clear visual hierarchy - Clear grouping of headings, images and prices	<u>Strength</u> - Key information is visually prioritised, supporting efficient scanning	May improves scanning and reduces effort in product selection
	Consistent visual design - Consistent colours, typography and layouts	<u>Strength</u> - Creates a cohesive and predictable visual interface	May creates predictable browsing and smoother conversion
	Limited CTA coverage - Some promotional sections lack direct CTAs to their relevant pages	<u>Area for Improvement</u> - Missing CTAs reduce the visibility of clear next actions within promotional content	May interrupt product exploration and add unnecessary steps before users reach relevant pages
	Limited progress visibility - No clear customisation /order progress	<u>Area for Improvement</u> - Users receive limited visual feedback about their current stage	May create uncertainty and discourage completion

Overall, V1 establishes a clear and consistent visual interface, but limited CTA coverage and visual feedback may create friction in the path to conversion

V1 - UX Evaluation

Morville's UX Honeycomb evaluates user experience across seven dimensions: Useful, Usable, Findable, Desirable, Accessible, Credible and Valuable (Morville 2004). The framework is applied to evaluate GOM VỊ's UX V1, supported by user feedback

UX Dimension	V1 Evaluation	Supporting User Evidence (Appendix I)
Useful	Diverse products and personalisation support different purchase and gifting needs	46.7% selected GOM Theo Ý as the most useful feature
Usable	Core tasks are clear, but extra customisation and ordering steps reduce task efficiency despite good comprehension	86.7% rated ordering clarity 4-5, 73.3%rated GOM Theo Ý 4-5
Findable	Products are generally easy to locate, but indirect links add extra steps and reduce discovery efficiency	73.3% rated product finding 4-5, users noted indirect collection links
Desirable	Consistent colours, imagery and Vietnamese-inspired design create a distinctive and engaging experience	100% rated visual design 4-5
Accessible	Clear typography and layouts support readability, but accessibility was not formally tested	N/A
Credible	Product and policy information supports trust, but language and pricing inconsistencies may reduce information reliability	93.3% found product information sufficient
Valuable	Personalisation, regional discovery and gifting create customer value while supporting purchase intention for the business	73.3% rated purchase/gifting likelihood 4-5

Overall, V1 delivers strong usefulness and desirability, while usability, findability and credibility remain key areas for improvement

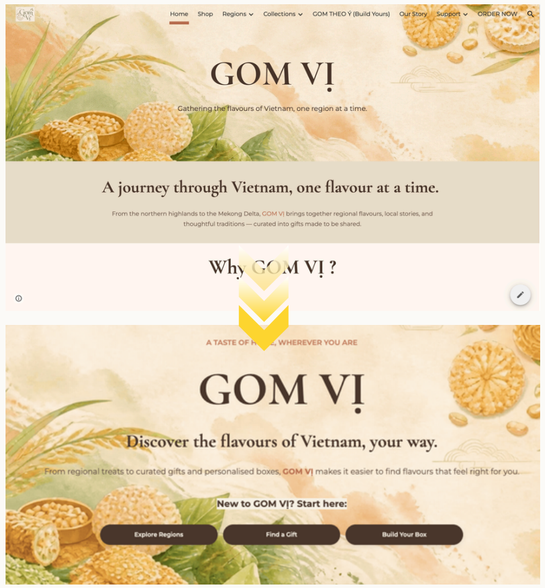
V2 - Iterative Improvements

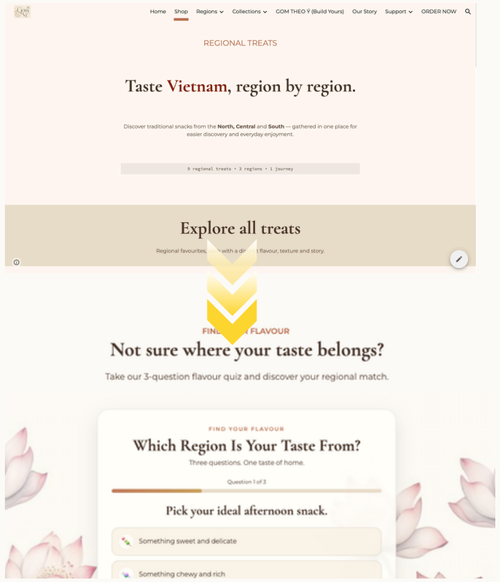
IMPROVEMENT BASIS	UX IMPLICATION	V2 CHANGES
• User feedback and usability observations • UX/UI evaluation • Customer journey analysis • Conversion-oriented design review	Supports scanning and helps users distinguish important product information	**Preserved and extended** through clearer homepage sections, product cards and structured product-detail information
	Builds familiarity and reduces unnecessary cognitive effort across pages	Maintained across V2, while applying the same visual system to newly added discovery and product-detail pages
	Users may be uncertain about the intended next action, weakening the conversion hierarchy	Clearer CTA roles and progression: Explore / View Treat → Add to Cart → Order Now
	Users receive insufficient feedback about where they are in the customisation journey	Improved through a clearer sequential order flow; an explicit progress indicator remains an opportunity for further optimisation

PRESERVE STRENGTHS + ADDRESS FRICTIONS → **V2 REDESIGN**

Improvements: V1 → V2

HOMEPAGE ORIENTATION & PRODUCT DISCOVERY





V2 DESIGN CHANGE

- Clearer brand/value proposition
- “New to GOM VỊ? Start here” entry point
- Find Your Flavour guided experience
- Customer Favourites introduced earlier
- Multiple entry points into products and regions

Important information appears earlier and in a clearer sequence.

Users understand what GOM VỊ offers before being asked to browse.

Popular products and guided pathways reduce the effort required to decide where to begin.

NAVIGATION & INFORMATION STRUCTURE

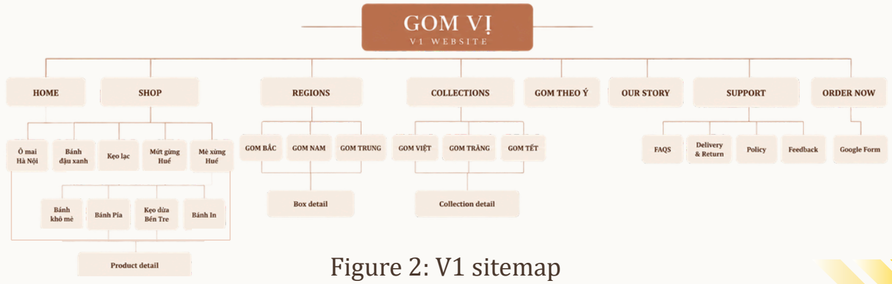


Figure 2: V1 sitemap

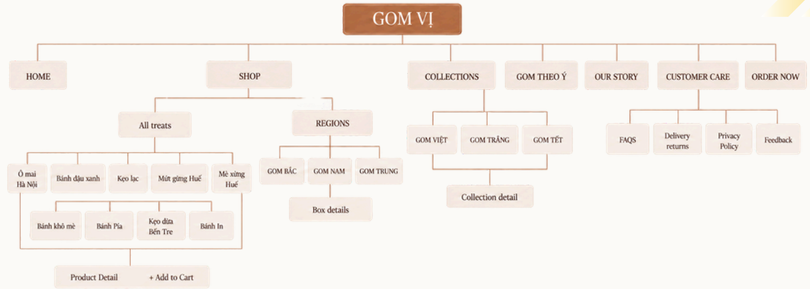

Figure 3: V2 sitemap

V2 DESIGN CHANGE

V2 reorganises content around distinct shopping intentions: browse individual treats, explore by region, shop curated collections, customise a box, or move directly toward ordering.

Users can predict where each pathway leads.

NAVIGATION

Related information is grouped logically.

STRUCTURE

Labels such as All Treats, Regions, and Collections provide stronger cues about destination content.

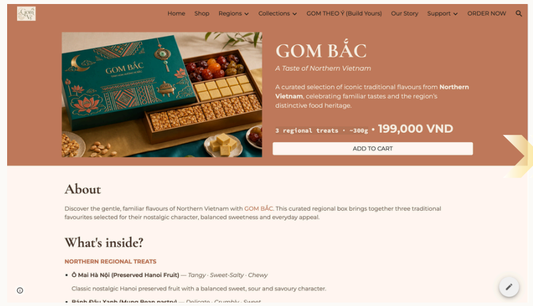
INFORMATION SCENT

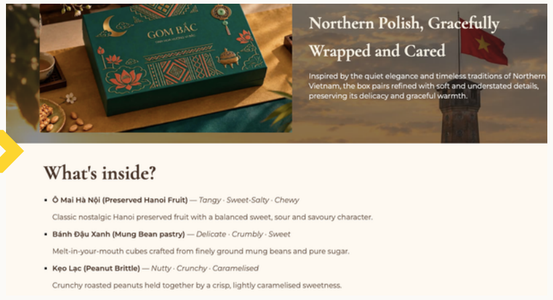
Journey Impact:

AWARENESS → CONSIDERDATION → PURCHASE

Improvements: V1 → V2

PRODUCT PRESENTATION & DECISION SUPPORT





"ALL TREATS" PAGE

- Regional categorisation
- Product name
- Flavour/texture cues
- Price
- "View Treat" CTA

"PRODUCT DETAILS" PAGE

- Regional origin
- Taste profile
- Pack size
- Price
- Product story
- Packaging information
- Related products
- Add to Cart

UX RATIONALE

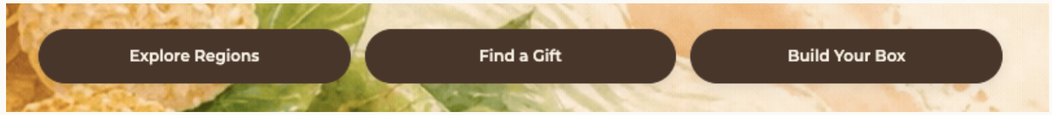
Key evaluation information is broken into recognisable attributes.

Price, size, origin and flavour can be understood before ordering.

Decision-critical information appears before supporting brand/story content.

V2 provides users with more information at the point where they are **comparing options**, **reducing the effort** required to make a purchase decision.

CTA & CONVERSION PATHWAY



STANDARD

Homepage / All Treats → View Treat → Product Detail → Add to Cart → Order Now

DISCOVERY

Homepage → Find My Flavour → Relevant product discovery

CUSTOMIZE

GOM Theo Ý → Choose box size → Pick treats → Personalise → Order

- Action-oriented CTA wording
- Stronger CTA hierarchy
- Product-level purchase actions
- Various pathways for different shopping intentions

CONVERSION HIERACHY | **PROGRESSIVE COMMITMENT** | **CONSISTENCY**

Figure 5: "What Our Customers Say" section

Testimonials provide social proof by showing prospective customers how others perceive the experience., adding a trust cue alongside product and brand information and can reduce perceived purchase risk.

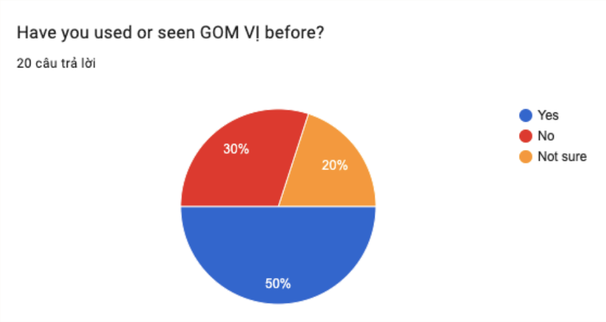
A/B TESTING: Homepage V1 versus V2

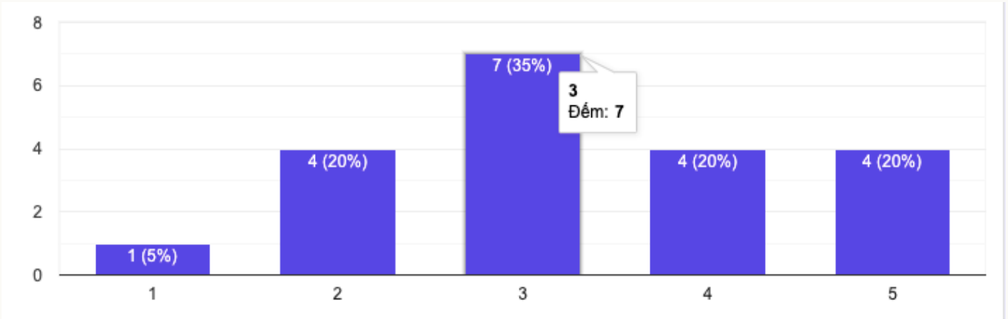
TEST OBJECTIVE

To determine whether the redesigned V2 homepage helps users understand GOM VỊ, identify where to begin, and move toward shopping more easily than V1.

TEST SETUP

Version A — V1: **n = 20**
Version B — V2: **n = 20**





Results

Metric	V1	V2	Change
Homepage clarity	3.30 / 5	4.43 / 5	+1.13
Ease of finding the next shopping step	3.30 / 5	4.29 / 5	+0.99
Rated homepage clarity 4–5/5	40.0%	85.7%	+45.7 pp
Rated next-step ease 4–5/5	40.0%	81.0%	+41.0 pp
Clearly understood what GOM VỊ offers	45.0%	66.7%	+21.7 pp

Note: Due to time and resource constraints inherent in a university project, the sample size was limited to 40 participants.

V2 substantially improved homepage orientation. Average homepage clarity increased from **3.30 to 4.43**, while the proportion of users giving a positive 4–5 rating more than doubled from **40% to 85.7%.**

VERSION 1

- Primarily category-led homepage
- Less explicit starting guidance
- No testimonial/social-proof section

VERSION 2

- Stronger homepage hierarchy
- Clearer product entry points
- Conversion pathways
- More explicit CTAs
- “What Our Customers Say” adds social proof

MAIN FINDING

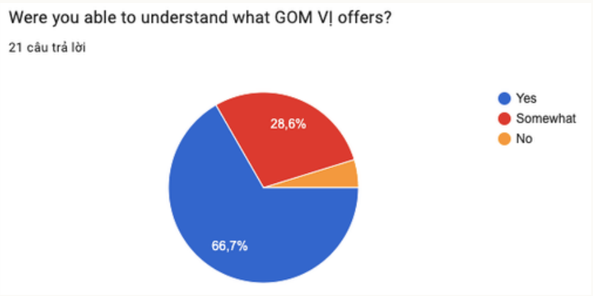
V2 provides **significantly stronger orientation** and product-discovery clarity, improving the **transition from Awareness → Consideration**, although some residual hesitation remains.

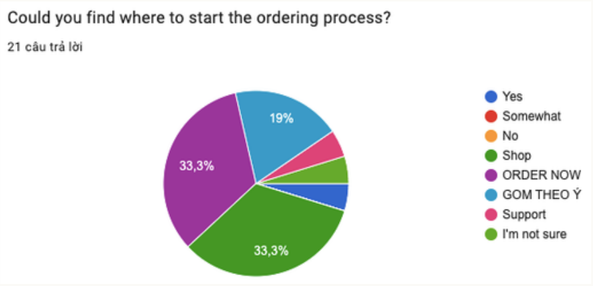
RMIT UNIVERSITY

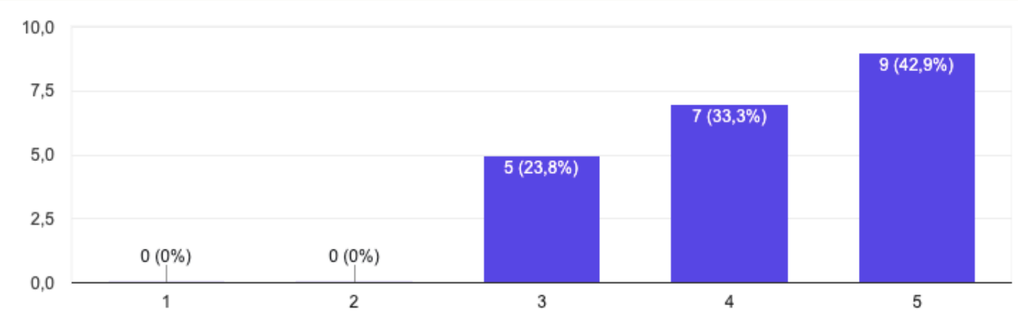
A/B TESTING: Product/CTA Journey V1 versus V2

TEST OBJECTIVE

To determine whether V2's clearer product information and CTA hierarchy make it easier for users to progress from product consideration to ordering.







Note: Due to time and resource constraints inherent in a university project, the sample size was limited to 40 participants.

VERSION 1

Browse → Product information → Less explicit / inconsistent next action → Order

VERSION 2

View Treat → Product Detail → Add to Cart → Order Now

MAIN FINDING

V2 improved all three product-to-order measures. The largest change was in ease of finding the ordering action, **increasing from 3.70 to 4.38**/5, while positive 4–5 ratings **increased from 55% to 81%.**

CONSIDERATION → PURCHASE

V2 creates a **clearer product-to-order journey,** with higher ease, next-step clarity and purchase confidence than V1.

Results

Metric	V1	V2	Change
Ease of finding the ordering action	3.70 / 5	4.38 / 5	+0.68
Clarity of what happens after clicking Order	3.65 / 5	4.19 / 5	+0.54
Confidence continuing with the order	3.80 / 5	4.29 / 5	+0.49
Ordering-action rating 4–5/5	55.0%	81.0%	+26.0 pp
Next-step clarity rating 4–5/5	50.0%	76.2%	+26.2 pp
Order confidence rating 4–5/5	60.0%	85.7%	+25.7 pp

V1 FEEDBACK

- “Difficult navigation”
- Unclear product details
- Uncertainty about what to buy
- Long purchasing
- Poor mobile experience

V2 RESPONSE

- Product Detail Pages
- Price, flavour, origin and pack-size info
- View Treat
- Add to Cart
- Order Now
- More consistent progression between evaluation and action

GA4 Measurement Scope

Tracking implementation

GA4 tracking was activated on **27 August 2026 at ~3:00 PM**. As GA4 does not retrieve pre-installation data, analysis is limited to post-installation behaviour.

Website iteration timeline

- **27 Aug:** GA4 tracking begins on V1
- **4–5 Sep:** GOM VỊ V2 progressively launched
- **9 Sep:** Final analytics cut-off for Section 3

Measurement context & limitations

GOM VỊ is an academic Google Sites prototype without real checkout or monetisation; Order Now and test-order progression therefore serve as **behavioural/conversion proxies rather than actual sales**. Results may also include **team/test traffic** and reflect a short observation window.

V2 was progressively implemented during 4–5 Sep; therefore, the comparison indicates directional performance change rather than a fully controlled experiment.

Analysis period

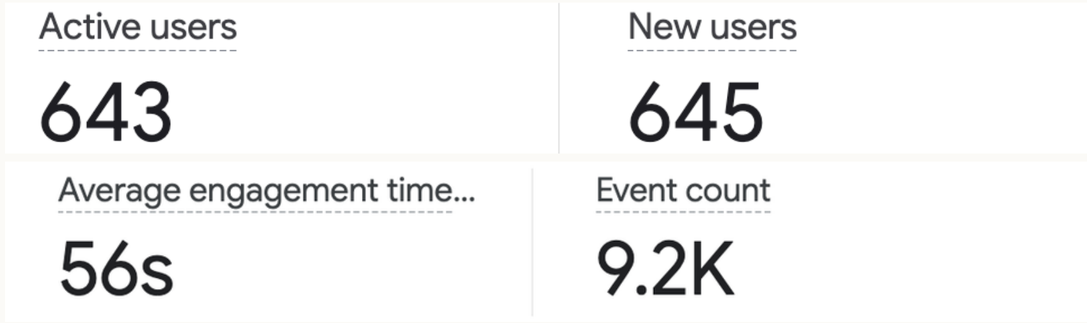
Period 1 · 27 Aug–2 Sep — V1-dominant period

Period 2 · 3–9 Sep — V2 rollout / post-redesign period

Measurement scope

GA4 was used to evaluate five required dimensions:

Additional behavioural evidence was examined through landing pages, page-level performance, events and navigation/drop-off patterns.



Sources: Google Analytics Help (n.d.)

Traffic Acquisition: Channel Mix and Discovery

Analysis period: *27 Aug–2 Sep vs 3–9 Sep 2026*

1) Acquisition was promotion-led

Direct and Organic Social dominated traffic, accounting for **99.9% of Week 1 sessions** and **90.9% of Week 2.** This closely reflects GOM VỊ's initial marketing strategy of social promotion and direct link sharing. The large Direct share may also include **untagged links** from messages/groups, which GA4 can classify as Direct.

- Week 1: Direct **53.27%**, Organic Social **46.59%**
- Week 2: Direct **46.63%**, Organic Social **44.30%**

2) Direct brought deeper visits than Social

Direct consistently outperformed Organic Social in engagement**: 64.85% vs 60.44% ER and 45s vs 24s** in Week 1; 57.78% vs 52.63% and 27s vs 22s in Week 2. The pattern is consistent with **higher-intent Direct visits**, while social traffic was stronger for awareness but shallower in on-site exploration.

3) Homepage traffic consolidated under /home, but landing quality weakened

Week 1 homepage traffic was split across the site root and /home; after combining both paths, homepage-related landing sessions represented **~67.6% of Week 1 sessions versus 62.4% in Week 2.** However, combined engagement weakened **(≈70.6% → 61.8%)** while **bounce increased (≈29.4% → 38.2%)**, indicating that the redesign consolidated the entry URL without strengthening landing-page performance. ***Landing-page GA4 evidence:*** *see Appendix M.*

4) Discovery broadened, but remained small

Week 2 introduced **Organic Search (19 sessions; 4.92%)** and **AI Assistant (4 sessions; 1.04%)** alongside stronger Instagram contribution. Organic Search also recorded the longest average engagement time **(1m 12s)**, suggesting stronger information-seeking intent; however, the small volumes mean these channels remain **emerging rather than established acquisition sources**.

Week 1 — Session default channel group

	Session primary…Channel Group)	Sessions	Engaged sessions	Engagement rate	Average engagement time per session
	Total	689 100% of total	432 100% of total	62.7% Avg 0%	35s Avg 0%
1	Direct	367 (53.27%)	238 (55.09%)	64.85%	45s
2	Organic Social	321 (46.59%)	194 (44.91%)	60.44%	24s
3	Unassigned	1 (0.15%)	0 (0%)	0%	0s

Week 1 — Session source / medium

	Session source / medium	Sessions	Engaged sessions	Engagement rate	Average engagement time per session
	Total	689 100% of total	432 100% of total	62.7% Avg 0%	35s Avg 0%
1	(direct) / (none)	367 (53.27%)	238 (55.09%)	64.85%	45s
2	l.facebook.com / referral	87 (12.63%)	57 (13.19%)	65.52%	38s
3	facebook.com / referral	56 (8.13%)	34 (7.87%)	60.71%	7s
4	zalo / zalo	51 (7.4%)	31 (7.18%)	60.78%	34s
5	l.instagram.com / referral	45 (6.53%)	26 (6.02%)	57.78%	11s

Week 2 — Session default channel group

	Session default channel group	Sessions	Engaged sessions	Engagement rate	Average engagement time per session
	Total	386 100% of total	211 100% of total	54.66% Avg 0%	28s Avg 0%
1	Direct	180 (46.63%)	104 (49.29%)	57.78%	27s
2	Organic Social	171 (44.3%)	90 (42.65%)	52.63%	22s
3	Organic Search	19 (4.92%)	10 (4.74%)	52.63%	1m 12s
4	Unassigned	18 (4.66%)	4 (1.9%)	22.22%	38s
5	AI Assistant	4 (1.04%)	3 (1.42%)	75%	13s

Week 2 — Session source / medium

	Session source / medium	Sessions	Engaged sessions	Engagement rate	Average engagement time per session
	Total	388 100% of total	222 100% of total	57.22% Avg 0%	28s Avg 0%
1	(direct) / (none)	182 (46.91%)	108 (48.65%)	59.34%	28s
2	l.instagram.com / referral	47 (12.11%)	28 (12.61%)	59.57%	21s
3	l.facebook.com / referral	32 (8.25%)	17 (7.66%)	53.13%	47s
4	ig / social	24 (6.19%)	14 (6.31%)	58.33%	21s
5	facebook.com / referral	21 (5.41%)	13 (5.86%)	61.9%	4s

GOM VỊ can **generate traffic effectively through active promotion**, but **acquisition is not yet self-sustaining.** The strategic priority is to **diversify discovery while strengthening the homepage landing experience** so acquired traffic progresses into deeper exploration.

Sources: Google Analytics Help (n.d.)

Engagement Depth, Page Performance & Interaction Behaviour

Week 1 homepage traffic was split across /view/gom-vi/ and /home; page-level cross-period comparisons are therefore interpreted directionally.

Bounce Rate

PERCENTAGE OF SESSIONS THAT WERE NOT ENGAGED

WEEK 1	WEEK 2	
37.3%	44.2%	↑ Higher bounce 6.9 p.p

More visits left without deep interaction

90% scroll-depth users

USERS WHO SCROLLED TO AT LEAST 90% OF THE PAGE

WEEK 1	WEEK 2	
48.8%	30.5%	↓ Lower deep scroll 18.3 p.p

Fewer users reached the lower page content

Click events

OUTBOUND CLICK EVENTS

WEEK 1	WEEK 2	
12	40	↑ More outbound click activity 28

Outbound/action clicks increased

1) Overall Engagement Weakened

Views fell **43.8%** and active users **47.9%**, while bounce rate increased from **37.3% → 44.2%** and average engagement time declined **54s → 47s**. However, **views/user (5.50 → 5.94)** and **events per user (12.89 → 13.81)** increased, suggesting fewer users remained, remaining users generated more page and event activity per user despite spending less engagement time, indicating mixed rather than uniformly weaker engagement.

2) High Event Volume Did Not Equal Successful Progression

It accounted for **31.1% of views and 34.5% of events**, yet also recorded the highest bounce among the major pages analysed **(37.59%)**. **High exposure therefore did not consistently translate into onward browsing,** indicating friction in the transition from homepage attention to downstream pages.

3) Scroll-depth Weakened

The share of users reaching **90% scroll depth** fell from **~48.8%** in Week 1 to **30.5%** in Week 2. This indicates that fewer visitors reached lower-page content, indicating that fewer visitors progressed to lower-page content and suggesting a hierarchy or content-relevance issue below the initial viewport. However, this metric only captures users reaching the 90% threshold and does not reflect partial-scroll behaviour below that point.

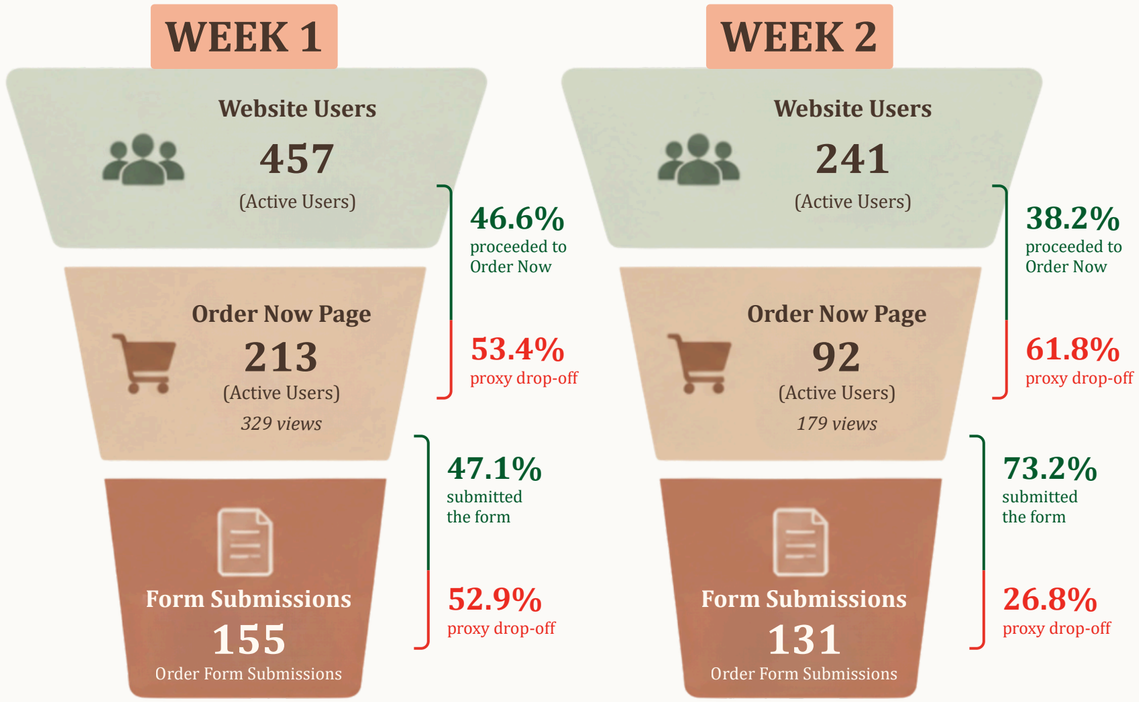
4) Outbound Click Activity Increased Despite Lower Traffic

Outbound *click* events increased **12 → 40** despite lower traffic. This suggests stronger action-oriented behaviour among a smaller group of users. However, as GA4 default click tracking captures outbound clicks only, it should be interpreted as a directional engagement signal rather than a complete measure of internal CTA interaction or conversion intent.

Week 2 produced **weaker overall engagement** but stronger depth among the users who stayed. The central UX issue was not homepage exposure itself, but progression: **converting that exposure into deeper browsing, lower-page exploration and movement toward action pages.**

Sources: Budiu (2020); Google Analytics Help (n.d.)

From Product Exploration to Order Submission



Form submissions are response counts while Order Now views may repeat; final-stage rates are therefore directional proxies rather than unique-user conversion rates.

CONVERSION SHIFT — WEEK 1 → WEEK 2

Order Now reach: 46.6% → 38.2%

↓ 8.4 pp

Final-stage completion proxy: 47.1% → 73.2%

↑ 26.1 pp

Fewer users entered the ordering journey, but those who did were much more likely to complete it.

1) Fewer users progressed to Order Now in WEEK 2

The proportion of active users reaching the Order Now page fell from **46.6% in Week 1 to 38.2% in Week 2**, increasing pre-order drop-off from **53.4% to 61.8%**. This suggests that the largest friction occurred before checkout, during the transition from browsing/exploration to purchase action.

2) Final-stage completion improved substantially

The **form-completion proxy** increased from **47.1% to 73.2%**, while **final-stage drop-off** declined from **52.9% to 26.8%**. This indicates that users who reached Order Now in Week 2 progressed through the final stage considerably more efficiently.

3) The bottleneck shifted upstream

Week 2 did not primarily suffer from **final-stage abandonment**; instead, the main weakness was **getting users from product exploration into Order Now**. This points to friction in the transition from browsing to purchase action.

4) Understanding the process did not guarantee progression

Although **86.7% of UX respondents understood how to order**, Week 2 still recorded a **61.8% pre-order drop-off proxy**. This suggests that clarity alone was insufficient: the main challenge was converting understanding into actual progression toward ordering.

The **primary conversion problem lies before the final form, not within it.** Week 2 attracted fewer users into Order Now, but those who reached the final stage completed it more efficiently. Optimisation should therefore prioritise **reducing friction between product exploration and entry into the ordering journey.**

Sources: Baymard Institute (2025); Google Analytics Help (n.d.)

Retention Resilience Despite Lower New-User Acquisition

1) New-user acquisition weakened sharply

New users fell from **458 in Week 1 to 187 in Week 2 (−59.2%)**, consistent with the broader decline in traffic observed in the acquisition analysis. This indicates that Week 2's smaller audience was driven primarily by weaker new-user inflow rather than a collapse in returning-user activity.

2) Returning users were comparatively resilient

Returning users declined only slightly, from **86 to 78 (−9.3%)**, despite the much larger fall in new users. This suggests that a core group of visitors retained enough interest to revisit GOM VỊ even as overall traffic volume decreased.

3) Returning Activity Became More Prominent

The returning-to-new user ratio increased from **18.8% to 41.7%.** This does not represent a retention rate or mutually exclusive audience share; rather, it shows that **returning-user volume remained comparatively resilient while new-user acquisition contracted sharply.**

4) Retention was concentrated in the short term

Cohort retention **dropped rapidly after initial visits** in both periods, indicating that repeat behaviour was largely short-term rather than sustained. For a prototype promoted through campaigns and peer networks, this pattern suggests that repeat visits were likely driven by immediate interest, follow-up exploration, or testing rather than **established habitual use**.

New Users
USERS VISITING FOR THE FIRST TIME

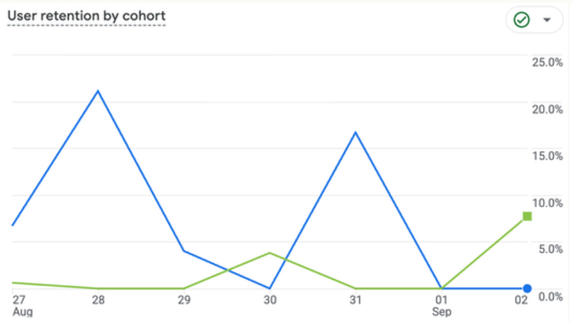
WEEK 1	WEEK 2	
458	187	-59.2% vs. Week 1

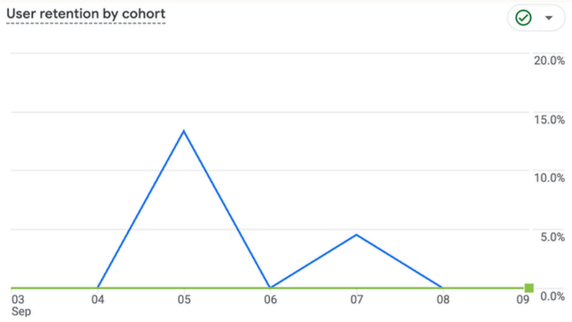
Returning Users
USERS WHO HAVE ACCESSED BEFORE

WEEK 1	WEEK 2	
86	78	-9.3% vs. Week 1

Returning-to-New User Ratio
RELATIVE RETURNING-USER VOLUME VS NEW-USER VOLUME

WEEK 1	WEEK 2	
18.8%	41.7%	+22.9pp vs. Week 1





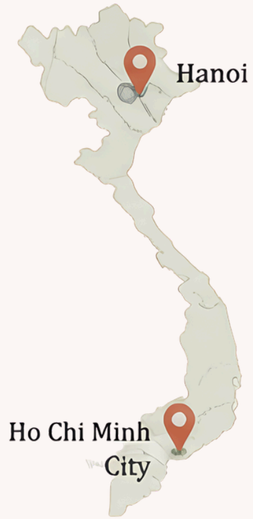
Week 2 attracted **far fewer new users**, but returning-user activity remained comparatively stable. This suggests that GOM VỊ's immediate challenge is not only retention, but **replenishing the top of the funnel** while giving returning visitors stronger reasons to revisit and progress toward purchase.

Sources: Google Analytics Help (n.d.)

Who Used GOM VỊ — and How They Accessed It

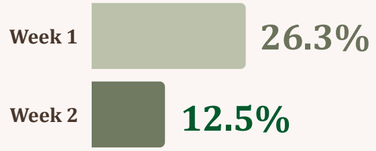
A. Geographic Concentration

Active users by city



Hanoi

Ho Chi Minh City



Engagement Rate

Hanoi

64.6% → 59.9%

(Week 1 → Week 2)

HCMC

65.9% → 52.1%

(Week 1 → Week 2)

1 Hanoi remained the dominant user base

Hanoi represented **57.3% of active users in Week 1 and 59.8% in Week 2**, indicating that GOM VỊ's audience remained strongly concentrated around Hanoi.

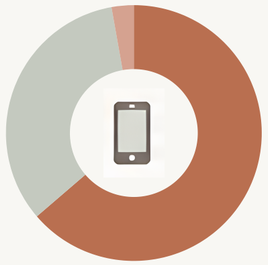
2 Geographic reach narrowed in Week 2

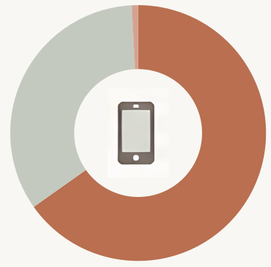
HCMC's active-user share fell from **26.3% to 12.5%**, while its engagement rate declined from **65.9% to 52.1%**. Week 2 traffic therefore became more geographically concentrated rather than expanding evenly across markets.

Note: Geographic patterns may partly reflect the team's promotion network and are based on a two-week observation period.

B. Device Usage & Engagement

Share of active users by device





Metric	W1 Mobile	W1 Desktop	W2 Mobile	W2 Desktop
Engagement rate	59.4%	66.3%	55.8%	59.7%
Avg. engagement time	25s	1m52s	18s	1m43s
Bounce rate	40.6%	33.8%	44.2%	40.3%

3 Mobile was the dominant device but not the strongest experience

Mobile accounted for roughly **two-thirds of active users in both periods**, yet consistently produced lower engagement rates and dramatically shorter engagement time than desktop. The device carrying the largest share of users was therefore also delivering the weaker interaction experience.

GOM VỊ's audience was **concentrated in Hanoi** and **predominantly mobile.** However, the more strategically important issue is not geographic expansion yet: mobile — the dominant access device — consistently underperformed desktop, making **mobile UX optimisation the more immediate priority.**

Sources: Baymard Institute (2025); Google Analytics Help (n.d.)

The Attention – Progression Paradox

The end of the funnel **strengthened** while the middle **weakened.**

Users understood the journey and high-intent users completed the final stage — yet too many were lost before reaching that point.

1) Understanding ≠ Progression

86.7% of UX respondents understood how to order **BUT** Week 2 pre-order drop-off = 61.8%.

INTERPRETATION ⇒ The problem was not simply informational clarity. Users could understand the process while still facing enough behavioural friction to prevent progression.

DIAGNOSIS ⇒ Behavioural friction remained after comprehension.

2) Lower Order Reach ≠ Weaker Closing

Order Now reach: 46.6% → **38.2%** ↓ ; **Yet final-stage completion proxy:** 47.1% → **73.2%** ↑

INTERPRETATION ⇒ If the final form were the dominant problem, completion should not have improved this sharply. Instead, the largest leak occurred before checkout entry.

DIAGNOSIS ⇒ The conversion bottleneck migrated upstream.

3) Dominant Device ≠ Strongest Experience

Mobile represented: **63.7% → 65.2% of users**

Yet Week 2:

- Mobile ER **55.8%** vs Desktop **59.7%**
- Mobile bounce **44.2%** vs Desktop **40.3%**
- Avg engagement **18s** vs **1m43s**

⇒ DIAGNOSIS

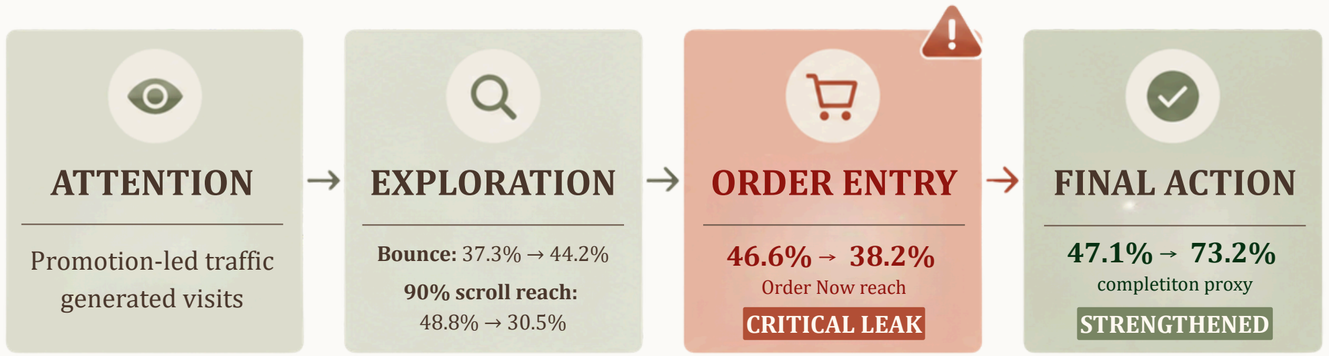
The device carrying the majority of users was delivering the weaker experience.

4) Less Traffic ≠ Retention Collapse

New users: **458 → 187 (−59.2%)** ; Returning users: **86 → 78 (−9.3%)**

INTERPRETATION ⇒ Week 2's traffic decline was driven primarily by weaker acquisition, while returning-user activity remained relatively resilient.

DIAGNOSIS ⇒ Volume weakened faster than audience continuity.



CROSS-CUTTING CONSTRAINT: Mobile ~65% of users, but underperformed desktop.

Core diagnosis: Within the prototype, GOM VỊ's critical weakness is not final-stage conversion — it is converting acquired attention into sustained progression toward purchase.

Sources: GOM VỊ UX survey and GA4 analysis (2026)

Overall Optimisation Strategy

Section 3 revealed an Attention–Progression Gap: GOM VỊ can generate traffic and users who reach the final stage complete it relatively efficiently, yet too many are lost **between exploration and entry into ordering**. Mobile compounds this friction, representing **~64–65% of users** while consistently underperforming desktop. The optimisation plan therefore prioritises **structural funnel fixes first**, followed by **product-discovery and support enhancements.**

Prioritised Recommendations

Priority	Improvement	Key Evidence	Key Action
1	**Simplify Ordering Journey / Add to Cart**	Order Now reach fell 46.6%→38.2%; pre-order drop-off rose to 61.8%; form-completion proxy improved 47.1%→73.2%	Add to Cart → single consolidated checkout with progress steps
2	**Mobile-Friendly Optimisation**	Mobile represented 63.7–65.2% of active users but consistently underperformed desktop; Week 2 ER was 55.8% vs 59.7%, bounce 44.2% vs 40.3%, and engagement time 18s vs 1m43s.	Optimise layout, compact grids, and forms for small screens
3	**Filters & Sorting on Shop/Collections Pages**	29.2% (7/24) requested product filters/sorting; Shop page currently has only region-only pill tabs	Add filter/sort bar (region, type, price) replacing region-only tabs
4	**AI Chatbot for Customer Support & Product Discovery**	Pre-order progression friction identified in Section 3; existing quiz supports taste-based discovery only.	Add a lightweight chat widget for instant, product-grounded answers

Priority 1 - Simplify Ordering Journey / Add to Cart

UX problem

Users understand how to order **(86.7% rated this 4–5/5)**, but qualitative feedback describes the flow as spread across **too many steps and pages/forms**.

Section 2 evidence:

Feedback explicitly requested combining product images, details, size/quantity/packaging and ordering into **one direct flow, rather than forcing multiple page/form transitions**.

Order Now reach **fell** from **46.6% to 38.2%**, and pre-order drop-off **rose** from **53.4% to 61.8%** - the majority of loss happens before checkout. In contrast, the form-completion proxy **improved** from **47.1% to 73.2%** and checkout drop-off **fell** from **52.9% to 26.8%**. This confirms the bottleneck is navigation/friction before checkout, not the final Google Form itself.

Proposed improvement:

Introduce a real **"Add to Cart"** step that consolidates product selection (image, description, size, quantity, packaging) into one place, followed by **a single checkout page** - removing the need to move between separate pages/documents.

Trust/ethical consideration:

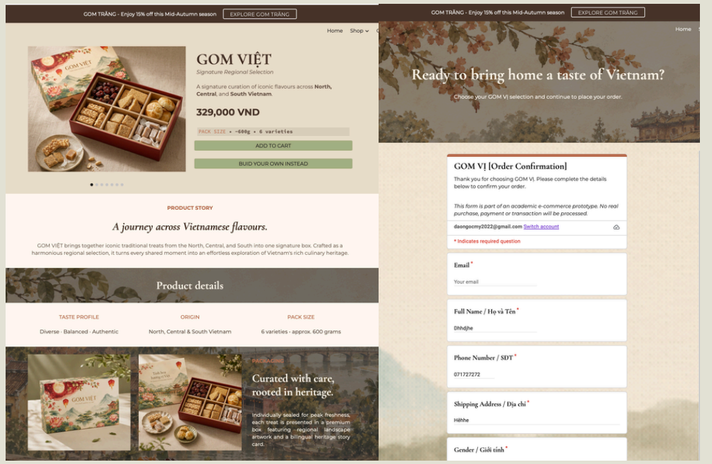
A visible, editable cart with a running total keeps pricing and selections transparent before the user commits to ordering - **no hidden steps or surprise information requests**.

Expected impact:

Since the evidence shows users who reach checkout are already completing it well, **reducing** the number of **transitions** before that point should directly address the confirmed bottleneck. This is a **plausible, evidence-aligned outcome**.

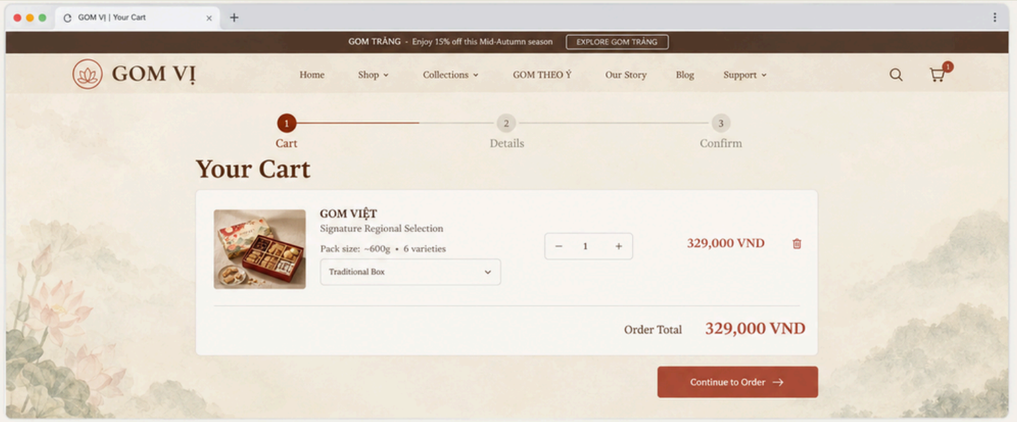
BEFORE

"Add to Cart" leads directly to a multi-step Order Now form; no cart page, no order summary, no progress indicator.



AFTER

Cart icon with item-count badge in header → dedicated cart page (items, quantity, packaging, running total) → single consolidated checkout with a simple progress indicator **(Cart → Details → Confirm).**



New cart page with live total and progress steps before the final form.

Priority 2 - Mobile-Friendly Optimisation

UX problem

The majority of users are **on mobile**, but their experience is measurably **weaker** than **desktop users'** across every available engagement metric.

Section 2 evidence:

33.3% (8/24) selected **"Better mobile experience"** as the most useful improvement - the strongest single data point in the survey.

Section 3 evidence:

In Week 1, Mobile accounted for 291 active users **(63.68%)** versus Desktop's 153 **(33.48%)** - mobile is the dominant device. Yet Mobile engagement rate was only **59.38% vs 66.25%** on desktop; average engagement time was **25 seconds vs 1 minute 52 seconds**; and bounce rate was **40.63% vs 33.75%**. This is strong, direct evidence (not assumption) that mobile users disengage faster than desktop users.

Proposed improvement:

Optimise touch targets and spacing, **simplify navigation** and **content hierarchy** for **small screens**, and ensure the new cart/checkout flow (Priority 1) works cleanly on mobile - since this is where the majority of the audience will experience it.

Trust/ethical consideration:

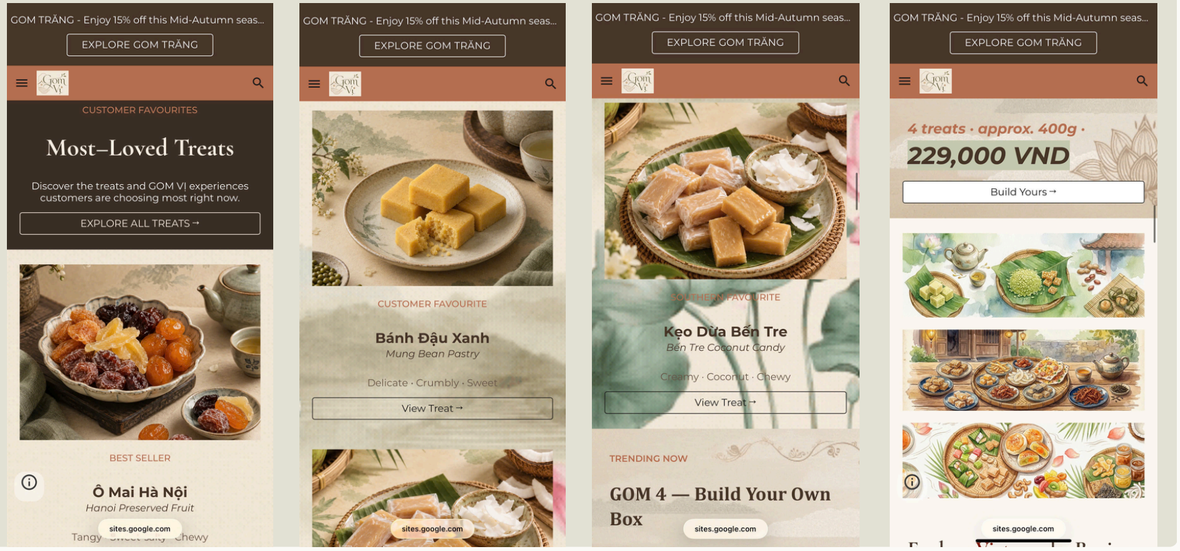
Clear, appropriately sized tap targets and simplified forms reduce accidental input errors, respecting the time and attention of the majority-mobile audience.

Expected impact:

Closing the gap between **mobile and desktop engagement rate/time/bounce** should improve overall site performance disproportionately, since mobile represents roughly two-thirds of all users.

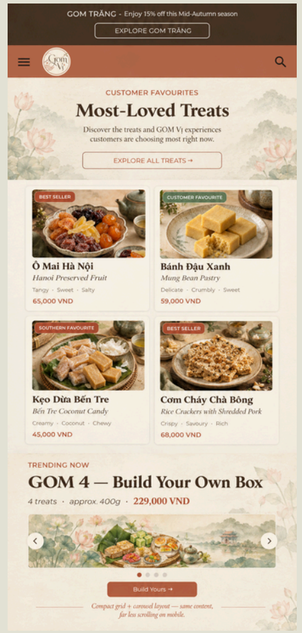
BEFORE

Dense content, small tap targets, **long unbroken scroll**, order form crowded on small screens.



AFTER

Responsive single-column layout, larger readable text and buttons, shortened mobile order form, **reduced scroll length** to reach key content.



Priority 3 - Filters & Sorting on Shop/Collections Pages

UX problem

As the product catalog grows across regions and collections, users have **no way** to **narrow down** options by price, region, or treat type - they must **scan the entire grid manually** to find something that fits their preference or budget, which becomes **increasingly inefficient** as more products are added.

Section 2 evidence:

29.2% (7/24) selected "**Product filters or sorting**" as their **most useful requested improvement**. Section 2 feedback also noted the site "**contains too much detail**," suggesting users want **faster ways** to **narrow options** rather than scan full listings. The Shop/All Treats and Collection listing pages currently have **no filter or sort controls**.

Proposed improvement:

Add a **simple filter/sort bar** (by price, region, or treat type) to the Shop/All Treats page and each Collection listing page.

Trust/ethical consideration:

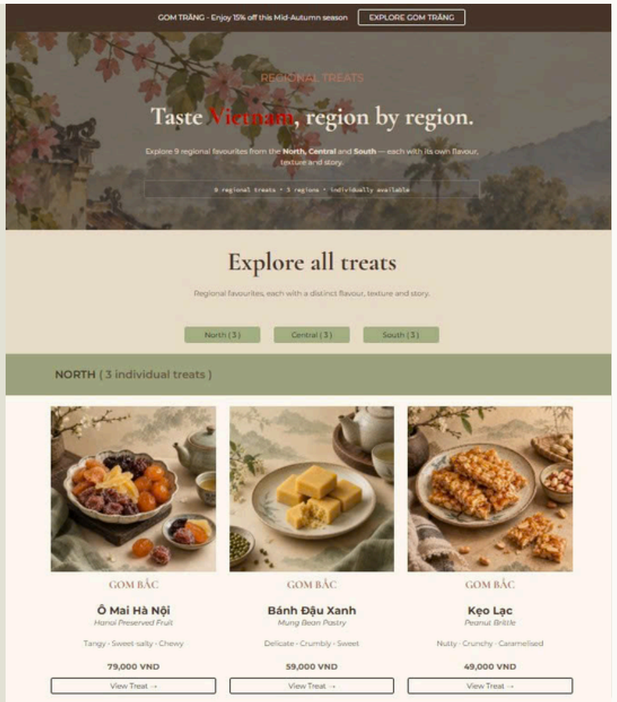
Filters should reflect **actual product data** - **no misleading labels** - **consistent** with the **authenticity concern** already raised about product imagery.

Expected impact:

Should **reduce** the remaining **browsing effort** for users comparing multiple treats, on top of the curation the homepage already provides.

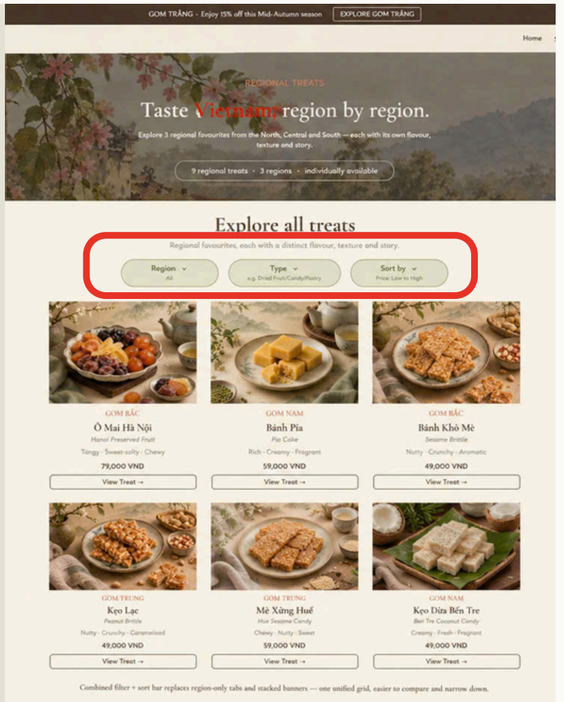
BEFORE

Shop/Collection page shows a plain grid of treat cards with **no way to narrow** by price, region, or type.



AFTER

A **filter/sort bar** appears at the top of the same grid (e.g., "Region ▾ | Price ▾ | Type ▾"), letting users **narrow results** without leaving the page.



Priority 4 - AI Chatbot for Guided Product Discovery & Purchase Support

UX problem

New and mobile visitors face a **multi-route site** (individual treats, regional boxes, collections, GOM Theo Ý) with **no guided way** to **quickly find what they want**, and not everyone who lands continues deeper into the site.

Section 3 evidence:

The bottleneck is confirmed to sit before checkout (Order Now reach **fell 46.6%→38.2%**). The homepage is the **largest single entry point** in Week 2, accounting for **55.97%** of landing sessions, but not all of these users continue browsing deeper. **Mobile** represents roughly **64–65% of users**, and this group shows **lower engagement** than desktop (per Priority 2 evidence) - meaning the majority-device audience is also the group most likely to need a **faster, lower-effort** way to **find products**.

Proposed improvement:

Add a **lightweight AI chatbot widget** (e.g., bottom-right corner) that customers can use to ask **natural questions** and get **quick answers** about flavour matches, price ranges, gift suggestions, and product details (ingredients, taste, packaging, timing) - complementing the existing taste quiz rather than replacing it.

Trust/ethical consideration:

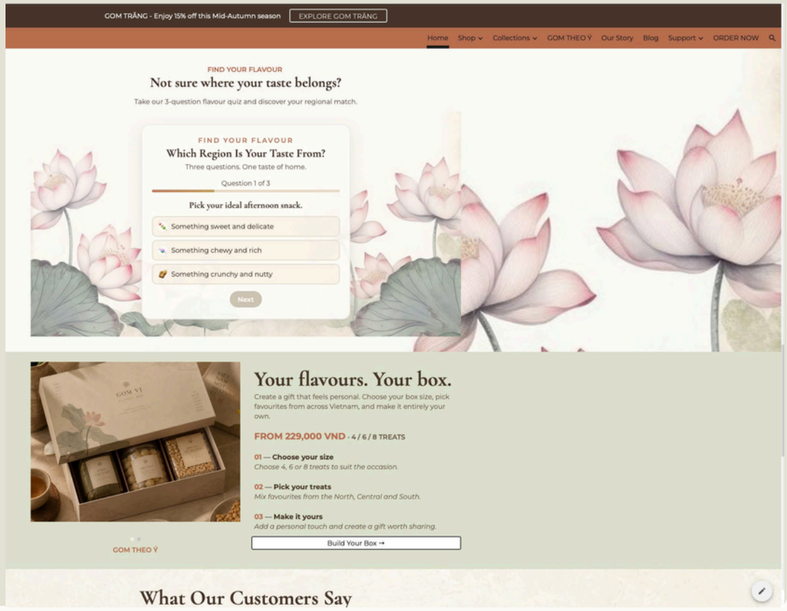
The chatbot should be **clearly optional (easy to dismiss)**, **never** collect **personal information** beyond what's needed to route the user, and **never simulate a human agent** without disclosure - maintaining **transparency** about what it is and does.

Expected impact:

Should reduce the effort needed for visitors with specific questions to get an answer, especially for the mobile-majority, homepage-heavy audience who may not want to browse multiple pages to find what they need.

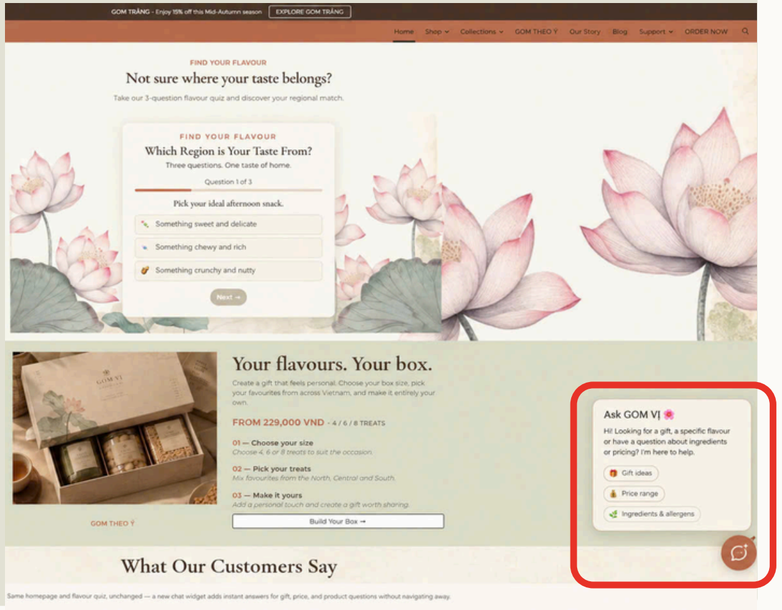
BEFORE

There's **no way** to ask a **specific question** - a user wondering "what's a good gift under 300,000 VND?" or "does this have peanuts?" has to **browse product pages manually** to find out.



AFTER

Same homepage and taste quiz remain unchanged, with a small chat bubble icon added in the bottom-right corner. Clicking it opens a **simple chat window** where the user can type or tap **quick-question suggestions** ("Gift ideas," "Price range," "Ingredients/allergens") and get an instant, product-grounded answer or a direct link to the relevant page.



Feasibility

1. Cart & Checkout

Ranked #1: strongest funnel evidence - GA4 shows pre-order drop-off is the main bottleneck. **Medium feasibility** - requires a custom - embedded app (similar to GOM Theo Ý), so not native to Google Sites, but the technical pattern is already proven on this site.

2. Mobile-Friendly

Ranked #2: mobile remained the majority device (63.7% → 65.2%) but consistently underperformed desktop. **High feasibility** — achievable through responsive layout, spacing, content hierarchy and embedded-component optimisation; no new custom app logic required.

3. Filters & Sorting

Ranked #3: real but preference-level evidence (**29.2% requested**), not a confirmed funnel blocker. **Medium feasibility** - native Google Sites grids don't support dynamic filtering, so it needs a custom-embedded component, though it can reuse the same pattern built for Priority 1.

4. AI Chatbot

Ranked #4: enhances an already-working feature (quiz) rather than fixing a gap; evidence is the most indirect. **Low–Medium feasibility** - requires integrating a third-party/custom AI-backed embed plus ongoing accuracy checks so it doesn't give wrong answers on price/ingredients, making it more effort-intensive to maintain than the other three.

KPI to Track Post-Launch

1. Cart & Checkout

Order Now reach rate ↑ (current**: 38.2%; **target**: toward ≥46%);**

pre-order drop-off ↓ (current**: 61.8%; **target**: <53%);**

cart abandonment rate (new metric to establish)

2. Mobile-Friendly

Mobile bounce rate ↓ (current**: 44.2%; **target**: toward/below 40.6%)**

Mobile avg. engagement time ↑ (current: **18s vs.** desktop **1m43s)**

Mobile–desktop engagement gap ↓

3. Filters & Sorting

Filter usage rate (new metric to establish)

Filter → Product CTR

Shop → Product progression rate ↑

Time/steps to relevant product ↓

4. AI Chatbot

Query resolution rate (new metric to establish)**;**

Chatbot → Product CTR

Chatbot → Order Now progression ↑

unresolved/fallback rate ↓

Note: Proposed targets use Week 1 performance as an internal reference point, not an external industry benchmark.

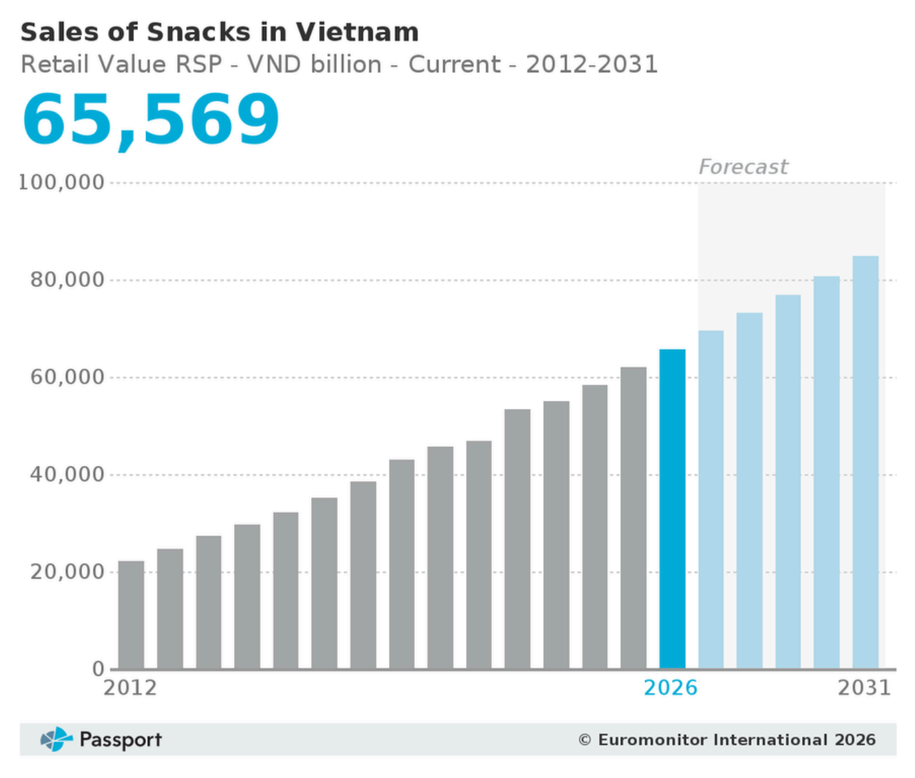
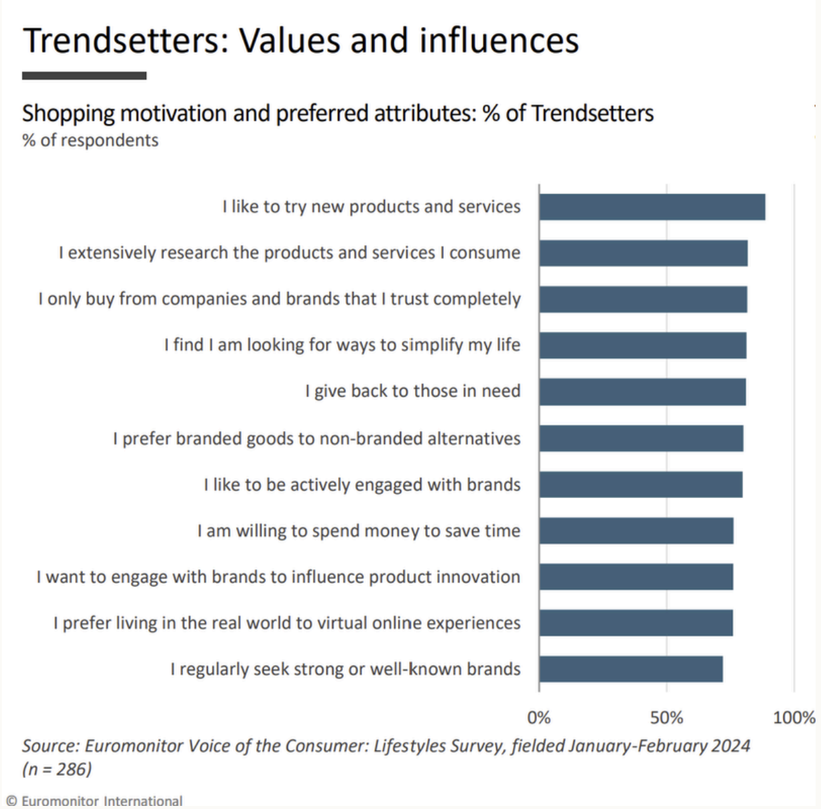
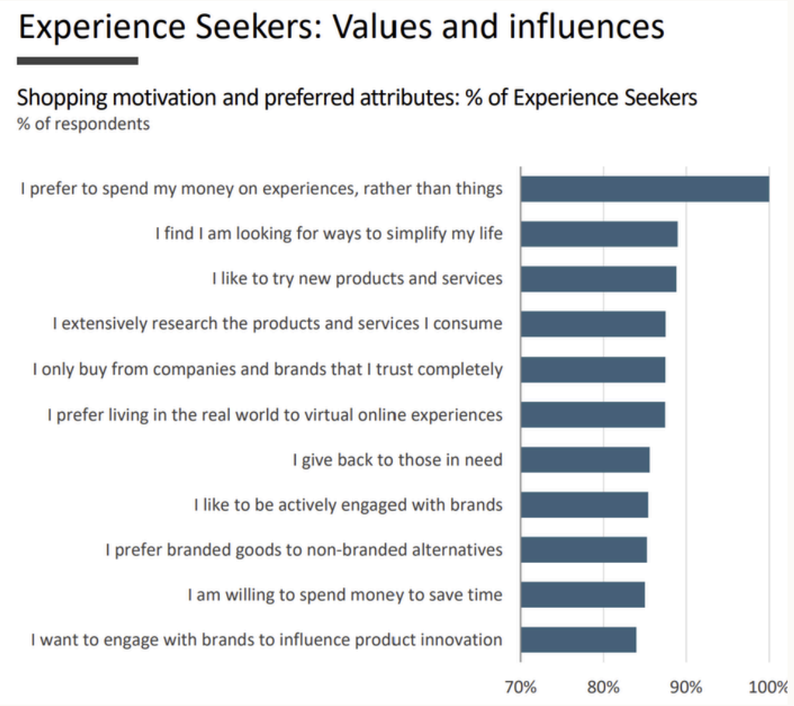
Appendix A: Market Gap



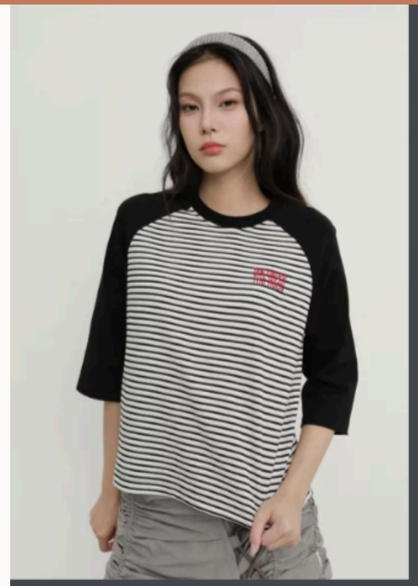
Appendix B: Market Gap



Appendix C: Market Gap



Appendix D: Customer Persona - Nguyen Minh Ngoc



Demographic

- Female 27 years
- Study In: Ha Noi
- Digital Marketing student
- Hometown: Hue City
- Income: Mid-income, young professional
- Purchase purpose: Personal snacking and gifting for family/friends

Behaviors

Behaviour

- Discovers new products through social media and online platforms (Instagram, TikTok, Facebook) rather than physical stores
- Shops online for convenience, fitting purchases around a busy work schedule
- Buys snacks for specific occasions — festivals (Tết, Trung Thu), visits home, or casual gifting to colleagues and friends
- Prefers curated gift boxes over selecting individual products one by one, especially when short on time
- Explores products based on region, flavour, and occasion rather than browsing a generic snack category

Psychographic

- *Emotionally attached to hometown flavours and childhood memories*
- *Values authenticity over mass-produced convenience*
- *Wants modern, presentable packaging — not old-fashioned*

Needs

- Convenient access to traditional Vietnamese snacks without needing to visit multiple markets or hometown sellers
- Gifting options suitable for friends, family, and colleagues
- Confidence that products are authentic and trustworthy

Preferences

- Clear, well-known origin stories that build trust in authenticity
- Modern, attractive, well-packaged products — not old-fashioned packaging

Frustrations/Challenges

Ngoc has lived in Ha Noi City for seven years, but the snacks she grew up with in Huế — mứt gừng made over a wood fire, mè xửng that isn't too sweet — aren't sold anywhere near her.

Even when she manages to find one real product, it's rarely more than that — a single snack, sold on its own, with no way to pair it with anything from the other regions she's also curious about. If she wants to send something home for Tết, or introduce a friend to more than one flavour of Vietnam, she'd have to track down several different sellers, trust each one separately, and pay for shipping multiple times over

The problem isn't that these snacks don't exist — it's that she has no reliable way to find the real ones from where she lives now.

GOM VỊ V2 is live — help us test it 🌿 Inbox ×

GOM VỊ Team
to bcc: me

Hi there,

GOM VỊ has officially launched **Version 2** of our website, and we'd love for you to be one of the first people to try it.

Based on feedback from our first version, we've redesigned and improved the website to make the experience clearer, easier to navigate, and more enjoyable.

If you have **2–3 minutes**, we'd really appreciate your help:

1. Visit the GOM VỊ V2 website: **https://sites.google.com/view/gom-vi/home**
2. Explore the pages and choose a product or collection you like.
3. View the product information and try the **Order Now** flow.
4. Submit a test order — **no real payment or transaction will take place**.
5. Share your feedback here: **https://sites.google.com/view/gom-vi/support/feedback**

Your feedback will help us evaluate what has improved and identify what we can refine further.

Please note: GOM VỊ is an academic prototype developed as part of the **Digital Business Development course at RMIT University**. It is not a real business, and no real transactions or payments will be processed.

Thank you so much for supporting our project.

GOM VỊ Team
A taste of home, wherever you are.
Discover the flavours of Vietnam, your way.

Stay connected with GOM VỊ

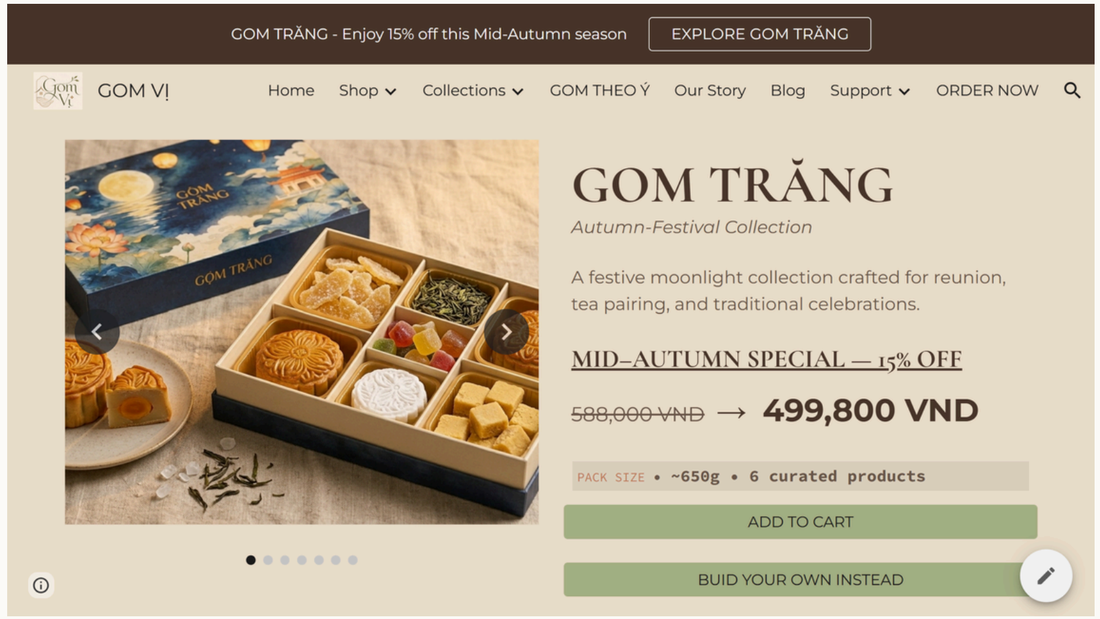
Email: gomvi.vn@gomvi.com

P/S: This email is part of an academic university project. GOM VỊ is not a real business.



Appendix I: V1 User Feedback

ase or	14. Which type of GOM Vị product interests you most?	13. What was the most confusing, difficult or frustrating part of the website, and how would you improve it?	16. What is one thing you would improve about the GOM Vị website?	17. What did you like most about the website?	18. Do you have any questions or anything else you would like to share?	19. Email address
3	GOM Theo Ý — Build Your Own Box		i think the description of taste and open time for each special event products	the color combination is very nice		
4	GOM Theo Ý — Build Your Own Box		should have Vietnamese	yes		lethuy241175@gmail.com
5	Curated Collections		nothing	Gom Trăng look very pretty		
5	Curated Collections	no	Add more dishes	the website design and product visuals	no	huyenngoc121203@gmail.com
3	Regional Gift Boxes	not really	If there's a story or explanation about a founder, I think it attracts customers more. I'd like to know who made or what kinda story behind for each products like snack box.	the design is pretty and I like the vibe that makes me feel local or rooted in Vietnam		youhuashanben3@gmail.com
4	GOM Theo Ý — Build Your Own Box	No	Incase this is a school project, i have no recommendations. But if its for practical use, I think you should use the gg form in the start of the process of choosing if u gonna use it to fill the whole process. I think its a bit inconvenient that after i choose everything on the web and think i completed it I still have to fill everything from the start in the gg form	The design		
4	None / Not sure yet	Web quá nhiều chi tiết, ngôn ngữ không đồng nhất	Nên tập trung vào các thông tin chính như hình ảnh mặt hàng, click vào là có thể xem được chi tiết mặt hàng (ý nghĩa của sản phẩm nếu có), nên tích hợp (hoặc có sự liên kết giữa các tính năng như click vào ảnh sản phẩm là order sản phẩm và lựa chọn size, số lượng, cách đóng gói (có hình ảnh mẫu) sẵn, tránh nhiều thao tác như điền nhiều thông tin theo form gg docs/ phải click vào nhiều nơi mới thấy thông tin sản phẩm và order được.			
3	GOM Theo Ý — Build Your Own Box	No	I wanna add a section for best-selling products and product recommendations to help customers find suitable items more easily	Design and the clear presentation of information	Nothing	
4	Curated Collections		The 'Gom Theo ý' feature is still buggy. It needs further improvement to make selecting desired products easier.			
5	GOM Theo Ý — Build Your Own Box	the collections displayed on the homepage dont link directly to the collection pages, creating unnecessary friction in the user journey.	more specific ingredient list of the product	người làm web		
4	Regional Gift Boxes		If the official website is using for commercial, I recommend to not use ai to generate photo (if it's not ai then great!)			
5	GOM Theo Ý — Build Your Own Box	Phần điền thông tin, chẻ ngàn lần, mất thời gian, ko thèm mua nữa!	Phần thiết kế gom theo ý cần thêm các sản phẩm khác nữa. Cần làm theo vụ mùa, có mùa trắng, có mùa cốm, có mùa tết, có mùa 8/3 hay 20/11 ...	Màu sắc nhã nhặn. Thiết kế tạm ổn, 6 điểm!	Chưa có những món theo mùa!	Ko cho!
5	Regional Gift Boxes	mixed of vietnamese and English	vietnamese or English subtitles	The design, clear products, pricing	Nong	

Dấu thời gian	Địa chỉ email	1. What is your name?	1. What is your age group?	2. Have you explored the GOM Vị website?	3. How easy was it to navigate the GOM Vị website?	4. How clear was the difference between Shop, Regions, Collections and GOM Theo Ý?	5. How easy was it to find a product, box or collection that interested you?	6. Was the product information sufficient to help you understand what you were buying?

Appendix O: CALCULATIONS & METHODOLOGY

G1. Acquisition Calculations

Promotion-led traffic concentration — Period 1
Direct + Organic Social
= 53.27% + 46.59% = **99.86% ≈ 99.9%**

Promotion-led traffic concentration — Period 2
Direct + Organic Social
= 46.63% + 44.30% = **90.93% ≈ 90.9%**

Organic Search share — Period 2
19 / 386 × 100 = **4.92%**

AI Assistant share — Period 2
4 / 386 × 100 = **1.04%**

Homepage landing share — Period 1 (/home only)
130 / 689 × 100 = **18.87% ≈ 18.9%**

Homepage landing share — Period 2 (/home only)
225 / 402 × 100 = **55.97% ≈ 56.0%**

G4. Retention Calculations

Change in new users
(187 − 458) / 458 × 100 = **−59.17% ≈ −59.2%**

Change in returning users
(78 − 86) / 86 × 100 = **−9.30% ≈ −9.3%**

Returning-to-New User Ratio — Period 1
86 / 458 × 100 = **18.78% ≈ 18.8%**

Returning-to-New User Ratio — Period 2
78 / 187 × 100 = **41.71% ≈ 41.7%**

Change in Returning-to-New User Ratio
41.7% − 18.8% = **+22.9 percentage points**

G2. Engagement Calculations

Change in total page views
(1,413 − 2,514) / 2,514 × 100
= −43.79% ≈ −43.8%

Change in active users
(238 − 457) / 457 × 100
= −47.92% ≈ −47.9%

Bounce-rate change
44.2% − 37.3%
= +6.9 percentage points

90% scroll-depth users — Period 1
223 / 457 × 100 **= 48.80% ≈ 48.8%**

90% scroll-depth users — Period 2
76 / 249 × 100
= 30.52% ≈ 30.5%

Change in 90% scroll-depth reach
30.5% − 48.8% = **−18.3 percentage points**

Change in outbound click events
40 − 12 = **+28 events**

Percentage increase in outbound click events
(40 − 12) / 12 × 100 = **+233.3%**

G3. Conversion & Drop-off Calculations

Period 1

- **Website active users = 457**
- **Order Now active users = 213**
- **Order Now page views = 329**
- **Valid Form submissions = 155**

Order Now reach
213 / 457 × 100 = **46.61% ≈ 46.6%**

Pre-order drop-off proxy
1 − (213 / 457) = 53.39% = **53.4%**

Final-stage completion proxy
155 / 329 × 100 = **47.11% ≈ 47.1%**

Final-stage drop-off proxy
1 − (155 / 329) = 52.89% = **52.9%**

G3. Conversion & Drop-off Calculations

Period 2
Website active users = 241
Order Now active users = 92
Order Now page views = 179
Form submissions = 131

Order Now reach
92 / 241 × 100 = **38.17% ≈ 38.2%**

Pre-order drop-off proxy
1 − (92 / 241) = 61.83% = **61.8%**

Final-stage completion proxy
131 / 179 × 100 = **73.18% ≈ 73.2%**

Final-stage drop-off proxy
1 − (131 / 179) = 26.82% = **26.8%**

Conversion Shift: Period 1 → Period 2

Change in Order Now reach
38.2% − 46.6% = **−8.4 percentage points**

Change in pre-order drop-off
61.8% − 53.4% = **+8.4 percentage points**

Change in final-stage completion
73.2% − 47.1% = **+26.1 percentage points**

Change in final-stage drop-off
26.8% − 52.9% = **−26.1 percentage points**

Period 1 Form-response alignment

Calendar-period responses = **161**

Responses submitted before GA4 activation on 27 Aug = **6**

Valid aligned Period 1 responses:
161 − 6 = **155**

Appendix O: CALCULATIONS & METHODOLOGY

G5. Geographic Calculations

Hanoi active-user share change
59.8% − 57.3% = **+2.5 percentage points**

Ho Chi Minh City active-user share change
12.5% − 26.3% = **−13.8 percentage points**

Hanoi engagement-rate change
59.9% − 64.6% = **−4.7 percentage points**

Ho Chi Minh City engagement-rate change
52.1% − 65.9% **= −13.8 percentage points**

G6. Device Calculations

Mobile active-user share change
65.2% − 63.7% = **+1.5 percentage points**

Period 1 engagement-rate gap
Desktop ER − Mobile ER
= 66.3% − 59.4% **= 6.9 percentage points**

Period 2 engagement-rate gap
59.7% − 55.8% = **3.9 percentage points**

Period 1 bounce-rate gap
Mobile bounce − Desktop bounce
= 40.6% − 33.8% = **6.8 percentage points**

Period 2 bounce-rate gap
44.2% − 40.3% = **3.9 percentage points**

Period 1 engagement-time gap
Desktop = 1m52s = 112s
Mobile = 25s
112 − 25 = **87 seconds**

Period 2 engagement-time gap
Desktop = 1m43s = 103s
Mobile = 18s
103 − 18 **= 85 seconds**
